Seek ye within the causation and
surely ye shall find the effects.

List ye, O man, while I speak of the future,
speak of the effect that follows the cause.
Know ye that man in his journey light-ward
is ever seeking escape from the night that surrounds him,
like the shadows that surround the stars in the sky
and like the stars in the sky-space, he, too,
shall shine from the shadows of night.

Ever his destiny shall lead him onward
until he is One with the Light.
Aye, though his way lies midst the shadows,
ever before him glows the Great Light.
Dark though the way be yet shall he conquer
the shadows that flow around him like night.

Far in the future, I see man as Light-born,
free from the darkness that fetters the Soul,
living in Light without the bounds of the darkness
to cover the Light that is Light of their Soul.

Know ye, O man, before ye attain this that
many the dark shadows shall fall on your Light
striving to quench with the shadows of darkness
the Light of the Soul that strives to be free.

Great is the struggle between Light and darkness,
age old and yet ever new. Yet, know in a time, far in the future,
Light shall be All and darkness shall fall.

List ye, O man, to my words of wisdom.
Prepare and ye shall not bind your Light.
Man has risen and man has fallen as ever new
waves of consciousness flow from the great
abyss below us toward the Sun of their goal...

>>>>>>>>>>>>>>>>>>>>>>>>

Now if you have spent all the time you need looking within, then go on to the same excerpt with added comments I have made below.

List ye, O man, to the words of my wisdom,
list to the voice of Thoth, the Atlantean.
Conquered have I the Law of time-space.
Knowledge have I gained of the future of time.
Know I that man in his movement through
space-time shall ever be One with the All

Consider what the Law of time-space may be? He follows this statement with the idea that knowledge of the future comes from this Law. So if we were to think of time as past and future, and that we are wanting to come to the knowledge of the future, because we assume it is not known, then this Law allows us to think differently, to think in a way that we can know the future.

If the past is akin to what we already know, then this would match our stored information, our ideas and thoughts that we have selected to remember and they become our reference to what we don't know yet. These stored concepts called beliefs, are a part of this Law that Thoth is speaking of and when he says he has conquered this Law, then he gains knowledge of what he is looking for, the future, or we could say his desire for that which is in the future.

In time there are only two things, that which is old and that which is new (the Past and the Future). In reference to the Law of Vibration, that which is old are our beliefs and that which is new are our desires.

Know ye, O man,
that all of the future is an open book
to him who can read.
All effect shall bring forth its causes
as all effects grew from the first cause.
Know ye the future is not fixed or
stable but varies as cause brings forth an effect.
Look in the cause thou shalt bring into being,
and surely thou shalt see that all is effect.

The future is available to him who can read, or to him who can see. If one knows, he can see, if he can see he can know. This is the old familiar saying found in these writings, as above so below, as below so above. Effects are from causes, and causes bring forth the effect. In time we could say cause is prior to effect, or that cause is past when effect is present. Cause is the old, effect is the new, cause is the underlying beliefs, the soil, the vibrational pattern matrix and the effect or fruits of the planting in the soil are the desire one brought to the soil, to the mind's vibrational matrix of beliefs.

The effects that have been created and the Universe we are observing right now are all the effects that are still in force. Then he states in the cause…shall all the effect be seen. They are not dissimilar, they are indeed the same. This may sound strange because we are seeing something new, but the underlying vibrational nature of the cause and effect must be the same, yet we can see that its newness reveals a change in form of some degree.

So, O man, be sure the effects that ye bring
forth are ever causes of more perfect effects.
Know ye the future is never in fixation but
follows man's free will as it moves through
the movements of time-space toward
the goal where a new time begins.

If we think of time as movement, causes bringing forth effects as the natural progress of cause to effect, belief changing as the new desire becomes the new belief and it is all through the choice of conscious man, deciding on what new desire is wanted.

Man can only read the future through
the causes that bring the effects.
Seek ye within the causation and
surely ye shall find the effects.

Because the future comes from desire, and desire can only come from appropriate vibrational patterns of the mind's belief system, then to know the future is to know the past. The past is said to repeat in a cyclical manner, because in essence, the future comes from the past, inherently similar, and in alignment with its vibrational pattern.

List ye, O man, while I speak of the future,
speak of the effect that follows the cause.
Know ye that man in his journey light-ward
is ever seeking escape from the night that surrounds him,
like the shadows that surround the stars in the sky
and like the stars in the sky-space, he, too,
shall shine from the shadows of night.

Seeds sprout from the darkness of the soil into the light as a new creation. Man's journey in life is from the past to the future, from prior cause to present effect, from a matrix of gestation to the birth of new reality. Man is a seeker, moving forward from old to new, and the journey (the movement) is called life.

Ever his destiny shall lead him onward
until he is One with the Light.
Aye, though his way lies midst the shadows,
ever before him glows the Great Light.

Dark though the way be yet shall he conquer
the shadows that flow around him like night.

Creation is the conscious control of placing a seed of desire into a womb that will support the birthing process. An environment of vibrational energy patterns capable of sustaining the cyclical nature of time-space regeneration, or simply put, the providing of a mother board capable of supporting the movement of a particular energy pattern over time, in time, cyclic motion.

Far in the future, I see man as Light-born,
free from the darkness that fetters the Soul,
living in Light without the bounds of the darkness
to cover the Light that is Light of their Soul.

Here is another iteration stating the fact of moving from the past to the future through the matching of harmonic energy patterns; from belief structures to desired effects. Desires are the purpose of life, because desires create the movement from past (belief, cause) to the present (effects) and we are living in the present in the effects, not in the old belief platform in the mind. The old belief platform would be considered dark in a sense, because it is not present in the energy or light of right now. It is in past darkness to the present five physical senses.

Know ye, O man, before ye attain this that
many the dark shadows shall fall on your Light
striving to quench with the shadows of darkness
the Light of the Soul that strives to be free.

This is very germane to traders, especially when one tries to figure out why they just made a horrible mistake by not following the plan they know they should be following. What was it that caused them to change their mind and go against the plan and ultimately sustaining a big loss? Where does this vibrational energy pattern, that is the matrix or cause of our next "effect", come from? We must say as Thoth is stating above, it comes from the shadows of darkness, or from the belief system within our mind.

The soil for the wrong decision is much different than the soil for following the plan's decision. The mistake happens only from appropriate causal material, only from a vibrational pattern that is similar to its effect, it comes from beliefs allowed to assume the role of present casual energy, or what we are thinking about at the moment of creating a new effect. We cannot create profit from a fear-filled platform, or an old belief system that doesn't produce winners. This is the area of shadows of darkness that must be moved to the sidelines and a proper winning matrix used. (As above so below, as cause so effect)

Great is the struggle between Light and darkness,
age old and yet ever new. Yet, know in a time, far in the future,
Light shall be All and darkness shall fall.

The struggle we are hearing here is the willingness or unwillingness of man to pay attention to the soil he is planting seeds in. Desire must be planted in similar energetic vibrational patterns or they simply do not come forth and stay. When old beliefs (from the darkness) from past beliefs different in vibrational harmony from our desires, come forth into the creation process, they cannot create or sustain what we want. Until man is willing to pay attention and insure a proper mind set, a proper bedding soil, a proper vibrational matrix of similar energy patterns of our desire, will he find that the darkness shall fail (because it will not be present to have an influence).

List ye, O man, to my words of wisdom.
Prepare and ye shall not bind your Light.
Man has risen and man has fallen as ever new
waves of consciousness flow from the great
abyss below us toward the Sun of their goal.

We are in a stream of energy, and our job if we want to look at it that way, is to focus this energy through a matrix of patterns that enable the desire to remain in time and space. Our creations are within our control, through the skillful use of the Law of Vibration that says, as above so below, as belief so desire (effect, created reality) and with a proper creating matrix (belief system) one can literally cause the outcome of desire (effect).

This is a little esoteric in nature, but with an open mind I'm sure you can see the relevance of this ancient discourse as seen in the context of what we are considering in this book. In fact, this is the most important process to obtain the realization of our desires, is that we allow what is matching our desire to be true, that we allow these words we have been reading to be a part of our belief system to bring forth that which we are clear about obtaining. Why read this book if I am not going to give it a place in my library of beliefs? For out of this library in the mind will come the planting soil for my desires.

Chapter 5

Law of Vibration and the Masters of the Far East

Follow your bliss.
If you do follow your bliss,
You put yourself on a kind of track
That has been there all the while waiting for you,
And the life you ought to be living
Is the one you are living.
When you can see that,
You begin to meet people
Who are in the field of your bliss,
And they open the doors to you.
I say, follow your bliss and don't be afraid,
And doors will open
Where you didn't know
They were going to be.
If you follow your bliss,
Doors will open for you
That wouldn't have opened
For anyone else

Joseph Campbell
1904 – 1987

Here is an excerpt from Book 1 (p. 136-140); The Life and Teachings of the Masters of the Far East, by Baird T. Spalding.

The Life and Teachings of the Masters of the Far East is a six volume set of books by Baird T. Spalding. In the 1890's, 11 scientists from the west traveled to India in search of the great spiritual Masters. Their experiences and encounters with these enlightened beings are recounted by Mr. Spalding who was one of the scientists and spent 3 years in their presence.

These Masters taught the scientists and answered many questions about creation and the universe and our role in the cosmos. Volumes 1, 2 and 3 are Spalding's personal experiences. Volume 4 is a study guide that was presented during the 1930's as The India Tour Lessons. Volume 5 contains lectures which Spalding gave during the last two years of his life. Volume 6 covers additional questions and answers.

I'll include the excerpt in its entirety without any notes so you can read it from an unbiased prospective for you to notice how your prior knowledge sees this. You may want to make notes as you read. Then I'll add some comments and how I see it is relating to the Law of Vibration as we are looking at it in this book. There isn't a right or better way, only one that is helpful or not. It will be different for each of us.

.....man can unfold in the fullness of his power only when he has a true ideal, a real purpose in life. A seed can begin to grow only when it is firmly fixed in the ground. The God power within can bring forth a true desire only when it is firmly fixed in the soul of man. We must all know, as Jesus did, that the first spiritual impulse toward expression is the definite desire to express.

Jesus said, 'Blessed be the poor in spirit,' realizing that any limitation in life that can create a desire in the individual to rise superior to the limitation and free himself from it is good. He realized that need is the prophecy of fulfillment. He looked upon every need as soil prepared for a seed. If the seed were planted, then allowed to grow and come forth, it would fill the need. Need or desire, in the unfoldment of life, is misunderstood. That it must be crushed out of the heart is taught by some great teachers. Jesus said, 'Woe unto you who are satisfied.' If you are satisfied, you are at a standstill. In order to contact life fully, we must seek each moment to express life fully. Desire for this is the urge toward it. Weary of crawling in the dust of the earth, man yearns to fly, and this longing invites him to find the manifestation of law that will enable him to rise above his present limitations. Finding it, he is able to go where he will, without thought of time or distance. It has been said that man proposes and God disposes. The reverse is true, for God proposes and man disposes; if man is so disposed, he can do all that God does. Cannot the Son do what the Father has done?

"The failure of outer things to satisfy leads the soul to seek the power within. Then the individual may discover that I AM, he may know that within him lies all power to satisfy the soul, to fulfill its every need and desire. This knowledge may not come until the individual is driven by the buffetings of the world to seek this inner plane of peace and calm. When he knows I AM is the fulfillment of his desire, the desire is filled. To look outside the God self for the fulfillment of his desire is folly. To unfold, the self must do the unfolding.

"Then what a realization, what an awakening to know the I AM; to know that within is the power, substance, and intelligence from which all forms take form; and to know that the moment a definite and true idea of desire can be intelligently formed, the power, intelligence, and substance of spirit must flow to it and bring it forth. Are these not treasures in heaven that we have not beheld? Here, in the unformed, lie boundless treasures hid within ourselves. How clear this is to the one that has found the pearl.

Then think, 'Seek ye first the Kingdom of God and His righteousness (right-useness) and all these things shall be added unto you.' The reason they are added is that they are made out of the very essence of Spirit. The consciousness must first find the Spirit before it can form the desired thing. 'The awakened one perceives the creative principle within; then he sees and his realization is his life opportunity. He has a vision or becomes aware of his possibilities or the possibilities that lie before him.

With the knowledge that the creative power lies within, he recalls his heart's desire; this becomes an ideal, or mold, that draws forth power and substance to fill the mold. I SEE is the soul's conception; it is the Promised Land, the dream come true, toward which the soul may look in faith. Although it may not yet be consciously possessed, it must come forth into visible form as he fulfills the law. A wilderness of experiences may have to be met and overcome.

This but makes the soul worthy of atonement. Understanding the vision as a Land of Promise, an ideal that is to be realized or to become real, the soul now sees only the good, the object of its desire. Here there must be no doubt, no wavering, no hesitation, for this would be fatal. One must be true to the vision and press on. This vision is typical and as necessary as the plans and specifications of a building. One must be as true to the vision as the builder is true to the plans and specifications the architect has furnished. All but the truth must be eliminated.

"All great souls are true to their vision. Everything brought forth was first a vision, a seed idea planted in the soul, then allowed to expand and come forth. These souls never allow the unbelief of others to influence them. They are willing to sacrifice for their vision, they are true to it, they believe in it, and it is to them as they believe. Jesus remained true and steadfast to His vision. He adhered to His plan, even when those nearest and dearest to Him were unbelieving and untrue. It was unto Him as He believed and it is so unto all.

"When the individual starts for the Promised Land, the land of darkness must be forsaken, forgotten. He must leave the darkness and start toward the light. It is impossible to go and stay at the same time. The old must be forsaken, the new adhered to. He must forget the things he does not wish to remember and remember only the things he wishes to retain. One is as essential as the other. The vision only must be remembered if he wishes it fulfilled. He must remember by holding in mind the vision he wishes to reproduce. He must disremember or refuse to remember the thing he does not wish to reproduce. Every idea, thought, word, or act must be true to the vision in order to bring it forth. This is true concentration, the concentration of devotion, the centering of the forces upon the essential. This is loving the ideal. It is only through love that an ideal can be given expression. Love makes the ideal

become the real.

"If at first he fails, he must be determined and press on. This is the exercise of the will, the cry of self-confidence, the expression of faith directing the power toward the ideal ...."

****

The process of learning is more about seeing inward than it is seeing outward. Without a conscious awareness of our own strengths and weaknesses, we find it difficult to use the outer knowledge. It would be like a person that has been given a strange tool and told to use it. Without knowing its functional purpose we couldn't make the most of it. Without knowing our functioning process we won't make the most of what we obtain as outside knowledge. Take the time to know thy self and all else will come much easier.

So if you made notes as you read the above excerpt, perhaps it would be good to read them and see how they reveal something about yourself. Watch your thinking and see where you may have resistance or where you are in tune with this information. How can it help or hinder me in my pursuit of getting what I want, and by the way, do I remember what it is I want by reading this book? What am I seeking so that when parts of it show up I'll remember to gather them in and use them in the process?

Ok, enough of the inward lets take a look at what Mr. Spaulding was so interested in, that he would write many books about it. We are going to focus on how his thoughts and concepts may give more understanding to our quest to understand the Law of Vibration. We are going to also watch our own reaction or response to these concepts. As we read, he is focused with a Judeo Christian bias, which may be different from our own. I would suggest being neutral about our thinking, and look to the underlying ideas that may be helpful.

.....man can unfold in the fullness of his power only when he has a true ideal, a real purpose in life. A seed can begin to grow only when it is firmly fixed in the ground. The God power within can bring forth a true desire only when it is firmly fixed in the soul of man. We must all know, as Jesus did, that the first spiritual impulse toward expression is the definite desire to express.

In this first paragraph we hear him speak about "power" and it only comes to the individual when there is a purpose or true ideal. Then the metaphor of a seed planted in the ground, gives us a clue, that he is speaking about that which is similar to the "ground" or "good soil for planting" is the *true ideal* or *real purpose in life*.

Purpose in life is the mental matrix (soil) for planting thoughts, ideas, desires, goals and wants (seeds). Purpose in life is what we believe in, our beliefs, the thoughts and concepts we have attracted, we have taken possession of and called them ours. We have given them life by our attention and in so doing; they are the matrix we create through. He speaks of the God power within, which is the ever present vibrational energy we are surrounded with, and with which we select from for our own use in creating what we desire.

He talks about expression and to express; and by this we can assume the outward movement of something from within, or the putting across of that which one is holding, and so it is akin to creation by the individual or forming something from a prior attachment within a matrix of compatible vibrational energy patterns. This being a yielding of a new expression of it; a pressing out of something old into that which is seen as new.

Jesus said, 'Blessed be the poor in spirit,' realizing that any limitation in life that can create a desire in the individual to rise superior to the limitation and free himself from it is good. He realized that need is the prophecy of fulfillment. He looked upon every need as soil prepared for a seed. If the seed were planted, then allowed to grow and come forth, it would fill the need. Need or desire, in the unfoldment of life, is misunderstood. That it must be crushed out of the heart is taught by some great teachers. Jesus said, 'Woe unto you who are satisfied.' If you are satisfied, you are at a standstill. In order to contact life fully, we must seek each moment to express life fully. Desire for this is the urge toward it. Weary of crawling in the dust of the earth, man yearns to fly, and this longing invites him to find the manifestation of law that will enable him to rise above his present limitations. Finding it, he is able to go where he will, without thought of time or distance. It has been said that man proposes and God disposes. The reverse is true, for God proposes and man disposes; if man is so disposed, he can do all that God does. Cannot the Son do what the Father has done?

If we stop to consider need or desire, as being the unfoldment of life, it seems appropriate that this fits our picture of desire being the future, and where can life unfold but into the future. Without this mechanism in place, there could be no movement, there would be no place to go, and as such it would be sensible to conclude, that without need and desire, without this movement, there wouldn't be life. It would be a static and unmoving environment without any signs of what we call life.

Life is the vibrational pattern of energy changing and evolving into a new and different pattern. The way this occurs, is by overlaying a new vibrational pattern onto an existing vibrational pattern that is well grounded into this environment. These patterns we have been referring to as beliefs and desires, are the structures forming this evolving set of energy patterns we call reality. When they are understood and fashioned into a conscious doing, then the Son realizes he can do what the Father does. He can create at will, by following the Law of Vibration. The Desire can assume the position of Belief; the Effect of the Cause can become the new Cause.

"The failure of outer things to satisfy leads the soul to seek the power within. Then the individual may discover that I AM, he may know that within him lies all power to satisfy the soul, to fulfill its every need and desire. This knowledge may not come until the individual is driven by the buffetings of the world to seek this inner plane of peace and calm. When he knows I AM is the fulfillment of his desire, the desire is filled. To look outside the God self for the fulfillment of his desire is folly. To unfold, the self must do the unfolding.

When one has tried unsuccessfully to satisfy their needs, it is usually because they

have been looking for the answers in the wrong place. Looking outside, or in the effects we are surrounded by, will not create something new. The material one is creating from by looking at the past or even the present, is material that is already created, though it can be used to form from, it is not going to create what is new without the addition of something new.

Desire is the new element that places the "something more" into the already formed matrix, it is the seed that is planted in the soil and begins to grow and produce the desire in form. These seeds called desire come from within; they are not found outside of oneself. Though the contrast of existing reality will provide things we can choose from, it is the combining of this contrast into a need or desire that brings about what is yet to be realized. Conscious desire is the internal catalyst that moves beyond the present confines of reality, into the creation matrix of the future and this always comes from within.

"Then what a realization, what an awakening to know the I AM; to know that within is the power, substance, and intelligence from which all forms take form; and to know that the moment a definite and true idea of desire can be intelligently formed, the power, intelligence, and substance of spirit must flow to it and bring it forth. Are these not treasures in heaven that we have not beheld? Here, in the un-formed, lie boundless treasures hid within ourselves. How clear this is to the one that has found the pearl.

The Law of Vibration is constant and can be counted on, every time. It is the basis for our Universe and everything herein. Once recognized, this stable platform for creation becomes our tool for shaping that which we want to experience. It is our connection to power and substance and becoming a self creating and self evolving entity.

Then think, 'Seek ye first the Kingdom of God and His righteousness (right-use-ness) and all these things shall be added unto you.' The reason they are added is that they are made out of the very essence of Spirit. The consciousness must first find the Spirit before it can form the desired thing. 'The awakened one perceives the creative principle within; then he sees and his realization is his life opportunity. He has a vision or becomes aware of his possibilities or the possibilities that lie before him.

In understanding the Law of Vibration, it is very clear that everything is a unique vibrational energy pattern, and when it is understood how one relates and interacts with this energy, then conscious desire becomes the interfacing tool between our life by default and our life by choice. Matching our choices of desire to the appropriate creating matrix will insure a predictable outcome and we will never have to just take what life gives us, but we can have what we want.

With the knowledge that the creative power lies within, he recalls his heart's desire; this becomes an ideal, or mold, that draws forth power and substance to fill the mold. I SEE is the soul's conception; it is the Promised Land, the dream come true, toward which the soul may look in faith. Although it may not yet be consciously

possessed, it must come forth into visible form as he fulfills the law. A wilderness of experiences may have to be met and overcome.

The example of a mold is helpful to see, that whatever we pour into a mold is what we will get. The form and shape will always be the same, unless we don't fill it to the top. This is sometimes the problem with creating, we fail to complete the process, we leave it partially complete, and in so doing, it is not a viable creation, it is not what we wanted. Another idea here is that even though the mold will only give its shape, its pattern of vibrational energy, we can add to this mold many different substances and receive in return many different creations.

If our mold is a donut shape form, like a torus, then by putting in a plastic material we will get a plastic donut, putting in concrete will yield a concrete donut, or putting in Jello mix we will get tonight's centerpiece for the table. All come from the same vibrational mold but each has been changed by the energy pattern we put into it. Many energy patterns will fit a belief system that says "I can do it" and the resulting experience will be as varied as the desires we put in. By the same token, the same things can be placed in an energy pattern of beliefs that say, "I can't do it" and this will give us a totally different set of results. Therefore, it is important what we put in and it is just as important what we put it in.

This but makes the soul worthy of atonement. Understanding the vision as a Land of Promise, an ideal that is to be realized or to become real, the soul now sees only the good, the object of its desire. Here there must be no doubt, no wavering, no hesitation, for this would be fatal. One must be true to the vision and press on. This vision is typical and as necessary as the plans and specifications of a building. One must be as true to the vision as the builder is true to the plans and specifications the architect has furnished. All but the truth must be eliminated.

When it is realized that desire and belief must match, and that it must remain in a compatible structure until it stabilizes into its own self sustaining form, then creation is simple. Yet this self sustaining environment can become polluted with another vibrational energy pattern and thus change the consistency of the new form. The most common vibrational energy pattern that can change a growing new creation is called "doubt". Doubt could be compared to a roaring fire being doused with a bucket of water. It is the opposite energy matrix that is needed to have something created. It is a polarity shift in energy that turns it around and destroys what has been building.

Creation requires consistency and strict adherence to the matching of similar patterns for similar results. Continued focus on the desire is the key to having the realization manifest.

"All great souls are true to their vision. Everything brought forth was first a vision, a seed idea planted in the soul, then allowed to expand and come forth. These souls never allow the unbelief of others to influence them. They are willing to sacrifice for their vision, they are true to it, they believe in it, and it is to them as they believe. Jesus remained true and steadfast to His vision. He adhered to His plan, even when those nearest and dearest to Him were unbelieving and untrue. It was

unto Him as He believed and it is so unto all.

"When the individual starts for the Promised Land, the land of darkness must be forsaken, forgotten. He must leave the darkness and start toward the light. It is impossible to go and stay at the same time. The old must be forsaken, the new adhered to. He must forget the things he does not wish to remember and remember only the things he wishes to retain. One is as essential as the other. The vision only must be remembered if he wishes it fulfilled. He must remember by holding in mind the vision he wishes to reproduce. He must disremember or refuse to remember the thing he does not wish to reproduce. Every idea, thought, word, or act must be true to the vision in order to bring it forth. This is true concentration, the concentration of devotion, the centering of the forces upon the essential. This is loving the ideal. It is only through love that an ideal can be given expression. Love makes the ideal become the real.

Undivided attention is required, clear focus on the desired effect is just as important as the holding of the underlying belief structure. Both are necessary, both are as important as the other, because with only one, neither will work. Attention on something other than what is desired will produce what is focused on, not the desire.

The conscious determination and attention to what is wanted is the only way to create. The only way to let go of a non-matching belief system, is to focus on another. We never lose any of our energy patterns, or beliefs or desires. We can temporarily not focus on them and by necessity; we find another to focus on. It is by this diligent effort to match vibrational patterns that we must pay attention to (the vibrational energy pattern that is present) and to continue to give attention to our desire. One could call this concentration, which has two definitions, one is to focus, and the other is to bring together into the same space.

"If at first he fails, he must be determined and press on. This is the exercise of the will, the cry of self-confidence, the expression of faith directing the power toward the ideal..."

As one comes to see how the Law of Vibration works, and how we participate in the creative process, we realize our connection to the power available in the Universe. It is ever present, but without knowing how to access it and successfully use it for our purposes, we lack the means of bringing into our lives that which we want. We are like the sailor on a ship without a rudder, and he is tossed about on the waves at the whim and fancy of the wind. His ride in life is not his decision, but it is the everyday effects of the external forces pushing him where it may, without any thought of his personal desires.

But when he learns to steer the vessel, and guide it, with the wind being a force he uses, then he sails to any port at any time and in a secure knowing it will happen. Fear is never a part of the one who feels in control, but only of the one who is not able to determine his destination. The willingness to observe and understand first hand the efficacy of the Law of Vibration as a means of living a life one desires, then one can relax into the peace and happiness we are here to experience. It is a choice unless it is not known.

Chapter 6

Ouspensky and the Law of Vibration

We are made wise
Not by the recollection of our past,
But by the responsibility for our future

George Bernard Shaw
1856-1950

Ouspensky

Another great mind that gives us another answer to what is going on within a vibrationally based world is Peter D. Ouspensky, a disciple of G. I. Gurdjieff. We will look at an excerpt of one of his writings, In Search of the Miraculous. There are many ways to read this and apply its ideas to a working model for understanding how vibration works to create from.

I will leave it up to you to decide what your creative matrix will be. The important thing may be to understand that all belief systems are a working platform for creation and that what one wants to create should be in harmony with this foundational structure.

I will make a few comments within the following excerpt, and I would suggest you add your own.

An excerpt from: In Search of the Miraculous, by P. D. Ouspensky

You can only know consciousness in yourself.

In order to really observe oneself, one must first of all remember oneself. In self-remembering, one's attention is directed toward the

object observed and toward oneself.

The first fundamental law of the universe is the "Law of Three". Every phenomenon is the result of simultaneous action of the three forces -- the positive, the negative, and the neutralizing.

Here we could add:
Past, present and future;
Faith, hope and charity,
Belief, reality, and desire
Realized thought, awareness, unrealized thought
Attack, surrender, and defend
Length, width, and height
(continue with your lists…)

The next fundamental law of the universe is the "Law of Seven" or the "Law of Octaves". In order to understand the meaning of this law it is necessary to regard the universe as consisting of vibrations.

Vibrations are the Universe. Then we go into the reasons "why" this is so, and Ouspensky puts it in the context of the Law of Seven which he fashions around the Law of Octaves. Here it becomes somewhat complex in its understanding, with uniformity becoming a non-symmetrical arrangement. Thus this cyclical view must be compensated for in a somewhat elaborate way to control the reliability of the forecasting procedure.

Because of the nature of this method and the complexity of its underpinnings, I am going to just include a small part of his work here. If it is an area that resonates with you, then look into it further. I will say it is in accord with the Law of Vibration, and as you read further in this book you are holding, you will come to see how.

For right now, I am going to leave you to read and learn from a great mind, Mr. Ouspensky. But in reading it, remember your mind is the same as his with one exception; you are unique in "what" you are interested in and what you desire. It may be different than him. Find your passion and your focus will bring you everything you desire when it is seated properly in the creative matrix of the Law of Vibration. The examples from these gifted men are for you to make up your mind of what you want to focus on. You must decide, so read on and find your pearls if they are here.

In ancient knowledge, the understanding of vibrations is based on the idea of the discontinuity of vibrations. All vibrations in nature do

not develop uniformly, but instead develop with periodic accelerations and retardations. The force of the original impulse in vibrations does not act uniformly, but becomes alternately stronger and weaker. The periods of uniform action of the momentum are not equal, and the moments of retardation of the vibrations are not symmetrical. One period is shorter; the other is longer.

In order to determine these moments of retardation, the lines of development of vibrations are divided into periods corresponding to the doubling or the halving of the number of vibrations in a given space of time. It has been found that in this interval of vibrations, between a given number of vibrations and a number twice as large, there are two places where a retardation in the increase of vibrations takes place. One is near the beginning, and the other occurs almost at the end.

These laws were incorporated into a formula. In this formula, the period in which vibrations are doubled was divided into eight unequal steps corresponding to the rate of increase in the vibrations. The eighth step repeats the first step with double the number of vibrations. This period of doubling the vibrations is called an octave, i.e., composed of eight. The separate "steps" of an octave show acceleration and retardation at different moments of the development of the period.

The seven-tone scale is the formula of a cosmic law which was applied to music. In the ascending octave, we will designate the low end "do" and the point at which the vibrations have doubled also as "do". The period between one "do" and the next is divided into seven unequal parts because the frequency of vibrations does not increase uniformly.
The ratio of the pitch of the notes is as follows:

do: 1
re: 9/8
mi: 10/8, or 5/4
fa: 4/3
sol: 12/8, or 3/2
la: 5/3
si: 15/8
do: 16/8, or 2
The difference in acceleration is as follows:

do -> re: (9/8 : 1) = 9/8
re -> mi: (10/8 : 9/8) = 10/9

mi -> fa: (4/3 : 10/8) = 16/15 [increase retarded]
fa -> so: (3/2 : 4/3) = 9/8
so -> la: (5/3 : 3/2) = 10/9
la -> si: (15/8 : 5/3) = 9/8
si -> do: (16/8 : 15/8) = 16/15 [increase again retarded]

The differences in the pitch of the notes are called intervals. There are three kinds of intervals in an octave: 9/8, 10/9, and 16/15. The smallest interval 16/15 occurs in the places of retardation in the octave. In music, one semitone is found between the following pairs: do-re, re-mi, fa-sol, sol-la, and la-si. A semitone does not exist in the mi-fa and si-do intervals.
The law of octaves explains why there are no straight lines in nature. At the moment of the retardation of vibration a deviation from the original direction takes place. straight line through "mi". But a deviation occurs between "mi" and "fa" which causes a change from the original direction. Let us assume that a movement begins at "do". It will continue in a From "fa" through "si", the movement continues in the new direction. Between "si" and "do" the second interval occurs which causes a new change in direction. The next octave gives an even more marked deviation so that the line of octaves may eventually complete a circle.

The "intervals" cause the line of the development of force to constantly change. Think how many turns the line of development of forces must have taken to come from the Gospel preaching of love to the Inquisition.
The law of octaves explains many phenomena in our lives:
The principle of the deviation of forces
The fact that everything in the world is moving and changing
In development rises and falls are constantly taking place

Nothing can develop by staying on one level. Ascent or descent is the inevitable cosmic condition of any action.

The consistent development of an octave is based on what looks like an accident. If octaves are going parallel to a given octave and intersect its "interval", they can "fill up" the "interval".
This "additional shock" must correspond in force and character to the interval it is filling. In the ascending octave, the second interval si-do is much larger than the first interval mi-fa. In the descending octave, the greatest "interval" occurs at the very beginning of the octave. A descending octave develops much more easily than an ascending octave.

The lines of development of forces which are straightened out by accident give man the illusion of straight lines. If by accident man's activity gives a result, he assumes that he can attain his aim.

Man can learn to recognize the moments of the "intervals" in all lines of his activity and can learn to create the necessary "additional shocks". Descending cosmic octaves are creative, and ascending cosmic octaves are evolutionary.

Octaves are divided into fundamental and subordinate. The fundamental octave is like the trunk of a tree. The seven fundamental notes and the two "intervals", the bearers of new directions, give altogether nine links in a chain, three groups of three links each. The human body has nine basic measurements expressed by the numbers of a definite measure.

Within vibrations, other vibrations proceed. Each note of any octave can be regarded as an octave on another plane...

(*See Appendix C 1.0, C 1.1 for additional information of astro cycles, octaval spacing's, and the Uranus cycle…)

This brings us to the end of our four gifted thinkers sharing their individual perspective on the Law of Vibration. Many more are available, in fact there are as many as there are people who have thought about it. It is an individual awakening that brings insight and understanding to us. We can read and listen to others, we can mimic and share their way, but to bring it into our self so it is a meaningful part of our creative nature, we must individualize it to fit our path, our unique road of desire.

This pathway of looking for answers to our questions, or for looking for clues to tell us what we want to know, is one that is used by many people. We are taught at a young age to look externally for new information. We are sent to school, we are encouraged to read books, to emulate the great minds that have gone before us. Very few are guided to look inwardly. Yet it is within that we must be familiar, in order to integrate the external input we receive.

It would be like driving up to a filling station and there are many kinds of fuel; gasoline, diesel oil, propane, hydrogen, electricity, wood and coal. If we don't know what we are using to power our engine to drive us around, we could stall our progress by putting in something incompatible with our present power generating system. If we find a new concept and we fill our head with its contents and it is not matching our core belief systems for creating, we will stall our ability to power our creations, to move them into manifested form for our use in the real world.

People who are continually looking for new ideas and not settling on one to create with, they are ineffective creators, they don't get what they want materially. They get what they want though, and that is a lot of new ideas and though this is a valid creation, it just isn't the creation that will bring you the rest of your desires. Focus is the key to getting what you want. Scattering your attention through out all the new ideas floating around this galaxy is not focus. It has no power to bring energy into a specific alignment with ones desire, and as such, the desire is not brought into your reality. (*see Appendix C 1.8)

Look back on these four examples of men who focused in their own way for their own purpose, and they created what they wanted. For us to create what we want, we must find our way and then align it with our desires. If you choose to go back and re-read the previous examples, you will now find a different message, you will be looking for a different pearl, and you will begin to build your creative engine and know what to put in it, you will gain conscious control of power when you do this.

This entire book will bring you a different awareness as you are looking for your way. Not just standing in awe of the new sky watching clouds drift by for entertainment. We will see in the clouds what we need to fuel our powerful creative engine. We are the only one that can see it, others see what they need and it is usually different. So let the clouds float by, look and find the ones that have meaning, and use them for your benefit. It is coming from your unique inward reservoir of beliefs and desires matching a focus you are holding in awareness, and as it brings toward it matching vibrational patterns to complete the creation, it uses the external as a catalyst to bring it about.

Desires are not made of clouds, but clouds can be the means of clarifying the focused matching of vibrational energy which is what desires are made of. All vibration adheres to the law that governs it, and when this law is understood, one has access to consciously adhering to this law and receiving its benefit, its created end product, this material world as we desire it. It is not difficult, but it is necessary to do it correctly.

Chapter 7

Spatial Representation

We have forty million reasons
For failure
But not a single excuse

Rudyard Kipling
1865-1936

Vibrational energy is what everything is made of. How we represent this awareness in our mental constructs and communications determines the efficiency with which we can form new creations and share them with others. This symbolic representation has evolved over the millennia's of time and is worth examining now to see how we are progressing toward our potential. Using an old deficient system would limit our ability to enjoy the potential we are in.

How do we see things? In what frame of reference do we see things? When we see, we have to make a determination of what it is in reference to, to understand its meaning or value or whatever our cognitive needs are at the time. This frame of reference is the relationship we create between what we are seeing and what we have seen. We are comparing the present with the past to give us our understanding of what the present is. This comparison is always taking place within a frame of reference or within a set of parameters that are constant and trusted as true.

When we look at the outside world of form, we place it in a frame that matches our past memories of the same or similar forms. Since Rene Descartes provided us with a cubic frame system called the Cartesian coordinate system, we have been putting everything into boxes as a way of storing them in our minds. These boxes have three dimensions and seem to work really well in our world. The boxes stack nicely, and

seem to hold everything we want. But let's take a short journey into perhaps some other ways and see if we may want to use more than just boxes.

Here are the five platonic solids we are all familiar with and we should include the sphere which is a very important solid that isn't normally included in this select group. There are many polyhedral solids we could look at, but let's look at just two and see if perhaps we have been looking through a glass darkly, and now may be the time to open to more.

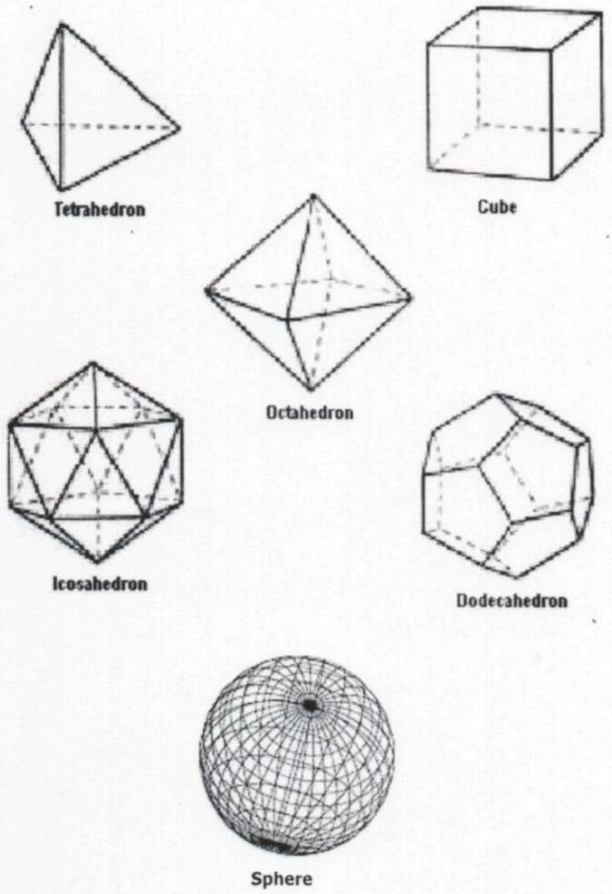

Figure 7.0

First we will talk about tetrahedrons and then spheres as packing containers for our "things" in life. All "things" are vibrational patterns of energy, and how they fit into these frames is important.

Here is a tetrahedron:

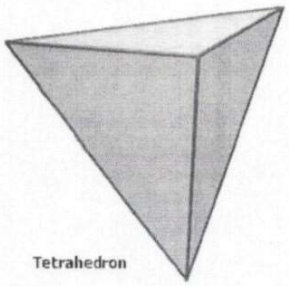

Figure 7.1

The tetrahedron is the simplest of all polyhedral solids. It is what we would call very stable, structurally sound and resistive to deformation or change. What a tetrahedron lacks that all the other platonic solids have is a symmetrical positional orientation. If we look at any of the platonic solids we can see that they all have a mirrored or reflective opposite side except for the tetrahedron. Look at one end it and it is like the other.

If we look at one end of a cube it looks like the other end, one end of a sphere, octahedron, icosahedron, or dodecahedron is the same. But the tetrahedron if we look at one end we see a triangle and at the opposite side we see a vertex point. This is a form that is two sided in an oppositional orientation as opposed to one sided as in all the other forms. They are balanced whereas the tetrahedron is unbalanced. But if we put two tetrahedrons together then the opposite ends become vertex points and they are now in balanced symmetry. This is the same as one tetrahedron and its mirror. This is the structure of duality. This is the structure of a three dimensional space of polarities.

Cubes are balanced symmetry but they don't need a mirror, they can exist independent in time and space as a single cube. Cubes can be aligned with their mirrors but there isn't the tension that one tetrahedron has. Cubes are whole and balanced within themselves whereas a tetrahedron needs an opposite. We are living in a world of opposites, yet we look at most spatial environments in a Cartesian coordinate system, or a cubic frame. This cubic frame works because it is already balanced but it doesn't represent as accurately the tension between polarities as does a tetrahedral frame.

I will describe a set of conditions that may give some added insight into seeing this dimension in a new way and possibly opening our minds to allowing more to come into perspective and thus having a clearer foundation to create from. Ideas are the building blocks of future manifestation and with more ideas come the opportunity to create more.

We will get a little technical here, if it isn't something that is of interest; then feel free to move on, but I would suggest allowing it to become knowledge if you are interested in this path. Remember there are many paths to the same thing, you can choose any.

Vibration is represented in many forms, and what we will look at here is a geometric representation of energy. Understanding this lets us see how markets may be seen as geometrical patterns that are showing up in the charts we are observing. The Screen on the computer is a flat plane and 2 dimensional. We have an X axis and a Y axis. On the chart the X axis represents the horizontal axis (time) and Y represents the vertical axis (price). This type of frame creates space in a cubic pattern and if other patterns are present they could be distorted. But since this is the only means at the present time available to most traders we must do with what we have. However, understanding its limitations and strong points could help us to make wiser decisions if we are willing to look.

Also below (in Figure 7.3) is a 3D Cartesian coordinate frame and though we don't get this kind of data yet it is something that could be possible if we want to consider a new way to look at markets. Imagination is the path to new possibilities.

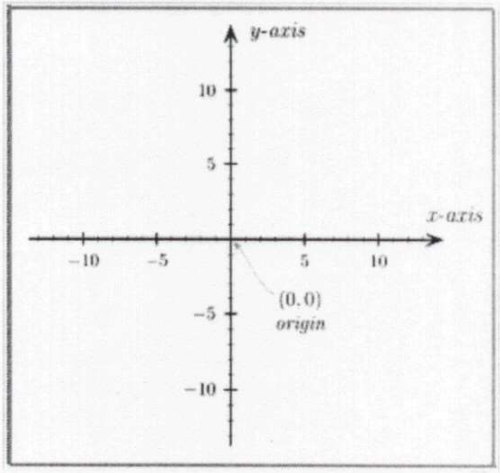

Figure 7.2

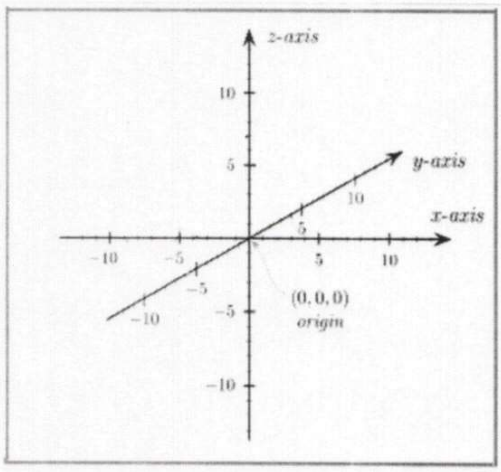

Figure 7.3

There are some markets that resonate within a cubic pattern and this Cartesian coordinate system works quite well, but some markets resonating to other patterns, such as tetrahedral patterns, octahedral patterns or icosahedral patterns may not register as well in a Cartesian frame. In 2D it would be squares fitting nicely but triangles, pentagons, and curvilinear forms have a harder time registering with the cubic parameters.

Here is an example of what I'm talking about:

Wein's Displacement Law is the relationship of energy packets to oscillation speed. It was related to what Gann was talking about in his law of vibration, because Wein was connecting Energy to Vibration, but it didn't work until Planck discovered a number to put in the equation to make it work in real life experiments.

The number became known as Planck's constant and is 6.626. It also works with a floating decimal, as long as the number is 6626. So Wein's Displacement Law is E =hV where h is Planck's constant.

E = the energy in a packet of energy (photon)
V = the vibration (the oscillation speed)
h = 6.626

In looking at this number, why is it so unique that it makes the equation work in real life? Here is what is interesting, .6626 is close to .6666 which is 2/3 (this number is very familiar). Now if we take the .6666 and subtract .6626 we get another number that is familiar too, it is calculated by Coulombs equation and is known as the "permittivity of the vacuum", a small amount of energy lost back into space (ether). Gann referred to this as lost motion/time. So Planck's constant is exactly 2/3 taking into account this loss.

When we look at space and time through a cubic frame, thanks to Rene Descartes, x-y-z axis, we are seeing the familiar chart on the screen without the z axis. If we look at a photon, this E in the formula (the packet of energy) - a photon being 2 tetrahedrons joined; when it passes through a cube it only fits half of it at a time. The total volume-energy that moved through the cube is two thirds (.6666) of the cubes volume. So if we measure space with tetrahedral coordinates, then the photon would fit exactly in the frame and we don't need an additional constant to make it work. Yep, we have E=V. Now that's a more natural way to see something.

Another way of looking at energy patterns besides through the familiar cubic frame would be to use Spherical Coordinates. Let's compare Cartesian vs. Spherical Coordinates and see what each has to offer.

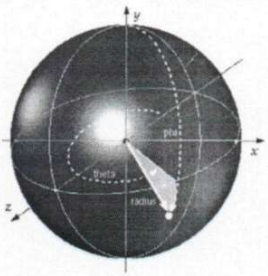

Figure 7.4 **Sphere**

Most of us see space as measured in a cubic frame (Cartesian coordinates). I would suspect that very few people have ever had a notion that we could see and measure space differently. Because of this, we have created all of our laws and principles within this framework, and have in a sense, painted our self into a corner (or box) so to speak, because we want our world to fit into the real world we see around us. This fitting the real world into a Cartesian framework has some drawbacks we may want to look at.

Cartesian coordinates as invented by Descartes were thought to be natural and very functional, but they have two important limiting points and may lead us to a false idea of reality. First, it doesn't provide us with an idea of scale (the size of the thing). Even though scale may be indicated on a drawing, as so many feet to the inch, this has little meaning if the person looking at the measurement has no prior experience of what a foot or inch is.

These measurements are of a different logical origin and they are of a different order because the actual measurement on the paper is not the same as what one finds in the outside world. The person must make this distinction and convert it someway to have meaning, beyond the literal meaning. One must know what the measure of an inch on the paper is and convert it to mean something representing the real inch, foot or mile found in the outside world. This is an individual process acquired by physically experiencing the measurements in the real world and with this experience being able to transpose it onto a flat sheet of paper or on a screen. This leaves room for many interpretations and so leads to many different results. We may not be able to see the same thing someone else sees and we may also have a difficult time conveying what we see to someone else. Not the most reliable system.

The second limiting factor with the Cartesian system is that it fails to provide a point of reference. When we build a house and have a blueprint, we have no problem with what goes where because we have the reference of horizontal and vertical from either the horizon line of the Earth in the real world or perhaps with gravity pulling a plumb bob straight down. So we know where up and down are, and left and right is interpreted as the same as our left and right as we are facing it.

But if we look at a map, we know it is very important to orient it properly to north and south or we will be off course. So the placing of the map to this referenced direction is found outside of the map itself and so may be prone to error. The reference point or orientation is not part of the Cartesian system and relies on each person to correctly orient it (again not the best idea to leave this crucial task to a human intellect that is prone to many distractions and errors).

These limitations of scale and orientation are addressed much more adequately within a Spherical Coordinates system. This system consists of a sphere in which an

observer at the center sees an object on the inner wall of the sphere. This reference system has three dimensions like the Cartesian Coordinate system (X, Y, Z) except they will be called R = the radius vector (a linear measurement), Long. = the longitudinal vector (measured in degrees), and Lat. = the latitudinal vector (measured in degrees). These three vectors are similar to the Cartesian X, Y, Z axes but providing much more pertinent information as to scale and orientation. Orientation is assumed inherent within the system – the observer is at the center and the object is on the inner wall. Scale is addressed with the use of the angular measurements of longitude and latitude as to its shape and where it lies on the inner wall. Scale on the Cartesian system would be the equivalent of radius on the Spherical system.

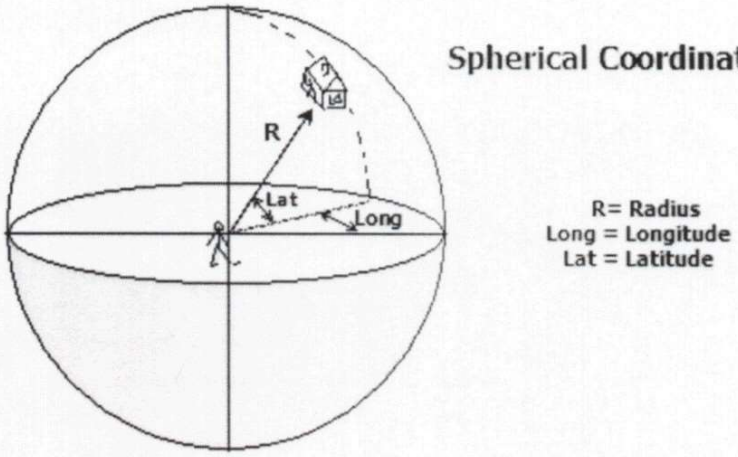

Figure 7.5

Within these two examples we can see some definite advantages over the commonly used Cartesian system. We can allow a broader view to add to our perspective of things instead of just settling for the old way. Being open to the new, is where movement and life comes from, holding on to old ways, is a much more limited experience.

Chapter 8

Vibrational Time

Time has no divisions to mark its passage
There is never a thunder-storm
Or blare of trumpets
To announce the beginning
Of a new month or year
Even when a new century begins
It is only we mortals
Who ring bells
And fire off pistols

Thomas Mann
1875 - 1955

In this chapter we are going to present some thoughts about time. They are here to give us a broader view of what time may be seen as and it is up to each of us to take what fits our personal situation. Don't run out in front of a car just because someone tells you to. Make sure you are going in the direction you want to go, and that means you must have already decided where that is. If you aren't sure, then I would stop right here and figure that out. How will you know you have found what you are looking for if you don't know what it is? You can read this book a thousand times but until you know what you want, you will just be reading words.

So if you aren't sure what you want, then just pick something that is at least in the right direction and as you move toward that, it will become clearer. You can always change your mind, but if you don't have anything in your mind, you can't do anything with that. So let's talk about time and see if it fits what you want.

Most people want to create in the present moment for this present moment. But this present moment is already created, it is done. We must create in the future to have it show up in time because it is made of time. We can create (allow) in imagination "now" but the manifestation of form in reality is with time.

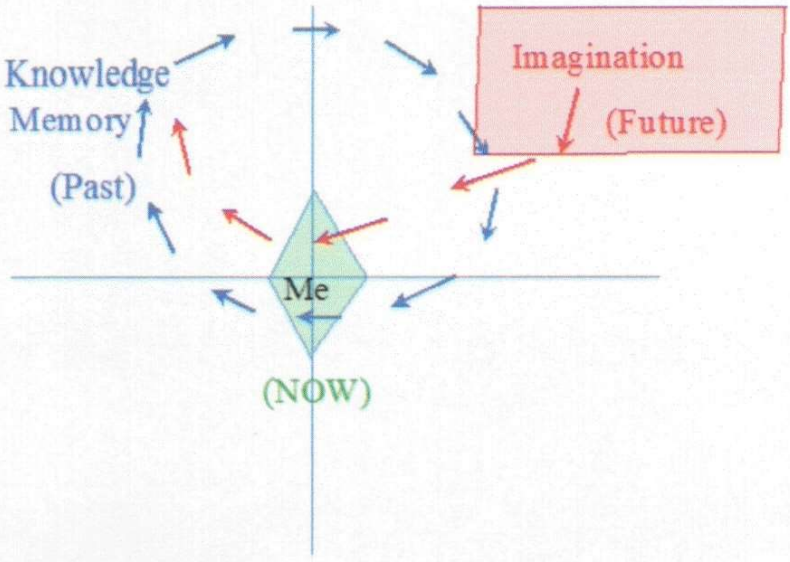

What is time? Time is more than ONE. ONE is presence (now). Time is the vibration between the past and the present or the apparent movement across space from one to two, from here to there, from point to point; it requires TWO. The clock ticks and it moves from one number to the next. Knowledge is the awareness of something in time, the awareness of two things appearing to be ONE.

Now if this is sounding pretty complicated or weird, then it is, because you haven't thought of it before this way. This is the first time of trying to "know" what it means. You can't know something the first time you see or hear it. If you read "Secrets of Trading and Making Money", you will remember the example of the Xerkite. If you haven't read the book you don't have a clue what a Zerkite is. You could make up a definition from what you think it could be, and this definition would come from what you already know (from your memory).

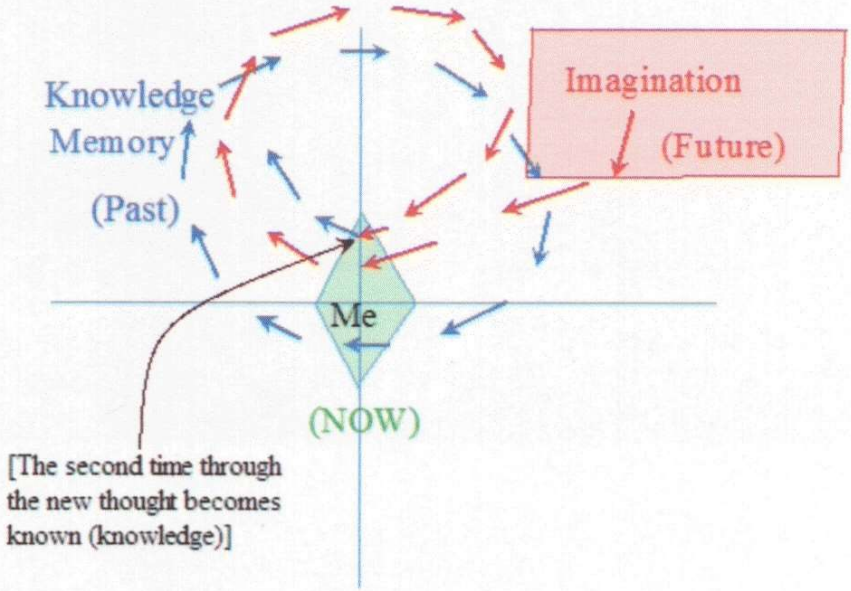

If you have read the book and remember what it was talking about, you know what a Xerkite is. It is known to you when you can remember a previous memory and compare it to the present concept you are considering knowing. If there is a match, then you say, "oh ya, I remember what that is, it is a ....." and you recite what you recall from your memory. This agreement of comparison is what we call knowing, or knowledge.

So when we look at something a new way, say we look at time in a way we have never looked at it. We will be moving onto unfamiliar ground and we won't be able to understand until we can compare it to something we already know (our beliefs) and then it can connect with that knowing (belief) and it becomes known too, it becomes true and something we believe in and we can use to create with. So opening to a new way of thinking and seeing will give us a broader base to create from and allow us to bring into form, more of our desires that are congruent with our beliefs.

On the next page are a couple of diagrams to play with; we need to start seeing time in a different way to have a different result. Let your mind relax and don't spend a lot of time in the beginning trying to figure things out, you need to plant the seeds and let them grow a little, before we can harvest our crop. We need to let new thoughts be introduced to us before we jump into bed with them.

Thoughts in Time

Thoughts in Time

Figure 8.0

We think of time backwards. We see the past as being done and we are in the present waiting for the future to come. So the flow of time appears to be from the past to the present to the future, but this doesn't make any sense.

Where do things come from and where do they go if they indeed pass through the present moment? It would make sense to say that things are going into the past so the only place they can come from is the future. So the flow of things (or time) is from the future to the past and not from the past to the future.

If you are wishing for something, then it hasn't come yet, it is in the future and when you get it, it is in the present and then it passes on to the past. The flow of time is from future to present to past. So if you are trying to find something and are looking in the past, it must cycle around to the future before it can come, it can't come from the past.

Imagination is in the future, Knowledge is in the past. Where do we create from? Imagination and desire are future related but most of us are looking in the past to create from. We are looking at present moment happenings and wanting to change them, not realizing they are already over with and moving into the past. Our focus should be on the future and what is happening in our imagination to give us a clue what is coming next.

Most traders are very interested in time. It is thought by many, to be more important than price. It is 1/2 the input in a price/time chart that we all use to see and know the market. We all have an individual understanding of this invisible thing called time. So what about it? Let's look at what is and isn't and then decide what it may be.

Time isn't something we can sense with our 5 physical senses, can't see, hear, smell, touch or taste it. It isn't a spatial entity like mass, or form, it isn't measured by length, width or height (although that is what we do to it). Ok, that pretty much takes care of the real world stuff, now what is it?

Time is a mental construct in our mind. It is an energy pattern not connected with the material world but independent of it, it is an energy pattern or vibrational pattern that is held in the mind when one focuses on the concept, belief or thought of time. It is something not in form but in the mind (another way of saying what is in the mind that is not here in reality is that it is imagination.) Is it ok to say time is imagination? Some people don't want to think of time this way, it is too real to be in imagination because imagination is like dreams and desires, future stuff, not present reality.

Now be patient with this if you can, let some new ideas come around and remember you never have to believe anything you don't want to. You can always change your mind and go back to what seemed to work before. But has time really worked for you? Have you had your say in what you wanted time to do or not do? Probably not, it is usually a default experience for most of us and we settled into the belief it is just the way it is and I can't do anything about it. Beliefs like "time marches on", "time and tide wait for no man", "there isn't enough time" are foundations for how we understand time.

These old foundational beliefs are very limiting and form a concept of time into a fairly small possibility. If we were to expand the boundaries we have placed time in and bring it into the framework of the Law of Vibration, we may be able to increase its usefulness. Usefulness meaning that we can use it; we can use it in a much broader and controlled arena. We can tell time what to do instead of it telling us what we can do (defaulting to the old structure that time is independent of any action of man.)

The Law of Vibration states that everything is vibration. Now if time exists, and we all are saying it does, then it also is vibration. Since we can't sense it with our 5 senses, it is not the same vibrational nature as matter, mass, form, things, 3 dimensional solid - liquid or gaseous vibrations.

It is a vibrational pattern recognized within our mind and used for our benefit or detriment. It is an energy pattern held internally in ones mind to help facilitate our actions in awareness, both internal and external. There was a lot said in the last two sentences, and we will see if we can make this thing called time useful in our everyday life, in our trading specifically and in life in general.

Time is a problem to many people, "I'm late", "I can't make it in time", "Time is running out". So can we move it out of the problem category into the helpful, supportive, simple, effortless, complimentary, uncomplicated, trouble-free category? Can we tell time what we want and let it give us that, after all isn't it just a vibration?

Time is an old friend we have had for a long while, and it is very much entrenched into our beliefs and it will take some doing to shift it. So let's get at it, and see what we can do. Let's see where we can take this old friend and move it into a broader arena that lets it play more, be more flexible and accommodating to our experience and not just limiting.

One of the many ideas of time is that is made of specific increments that are very exact and don't vary. A second is a second and we go to very extreme lengths to define how long it is and keep it the same. This limit of tolerance, this limiting framework we place time in, is in fact "limiting". By using time as a limiting energy, a limiting vibrational pattern, we are in fact limiting ourselves.

In this vast world of possibilities, we may want to have a little more leeway to maneuver in with our use of time. Making the road so narrow that we have to spend all our attention, staying between the lines, doesn't let us relax and enjoy the rest of what is here.

Time can absorb a lot of our attention, staying on time, being on time, it is such a big part of our life. We may not realize how much we are restricted by it, needing to stay between the lines or something bad will happen. We make the area of life outside of the lines on the road not available to us; it is not ok to go there. So we miss that, and perhaps it has a lot to tell us or give us, or show us. Apply this to trading and you will see some interesting possibilities start to show up. What is the rest of the story? What is there here I can't see? What is happening that I can't figure out yet? There is more than is found in the limited area between the lines, the boundaries of time.

These boundaries or limits are held in a vibrational pattern in the mind. They are established as true and are believed and so make up that part of our reality. Because they are creating reality for us, they are creating a limited reality and by the Law of Vibration we can know that what is true and real will draw matching vibrational patterns to add to this reality (this vibrational reality). These new limiting patterns will fit right into the existing limiting patterns and be sustained in time/space. So by using this limited time construct of vibrational patterns we create our world of awareness from this energy, and get similar limited energy forms and patterns.

We have been doing it for so long that we think it is the only way. We assume time is a limit and so we don't question it, or give it another possibility. We think time is linear, that one second follows the next and then the next follows, so if we have 60 seconds it equals a minute and it will take that long to get somewhere in our space, in our material world, in our world of physical reality that is realized by our body's 5 senses. Yet we remember that time is not sensed, it is not a part of this material world and it has nothing to do with it, unless the mind puts it here and recognizes it as part of it, even though it is invisible and untouchable and not here like everything else that is real physically.

What is the value in putting something into the real world that is not real and it is limiting? What are we doing? Have any good answers? "Well it helps us be on time." What? We have time because time says we need to be on time. That's interesting. Who is directing my life, me or some thought that really isn't even here? A limited concept saying I need to be limited and so I go along with it because everybody else is. There is an old saying, 1000 sheep jumping off the edge of a cliff doesn't make it right. What do I want to do, (this "one" here, not the 1000 sheep aimlessly jumping off a cliff because all the others are)? It is my universe and I get to have a say, if I want it. I can choose what I want and what I don't want here. What do I want?

Is it possible that I could look at time differently and not be seduced into the mass conscious belief that is so limiting? Could I decide to not jump with the other sheep and see what happens, see where another path leads instead of off the cliff into the limited rocks below?

Let's make some diagrams and see if pictures will tell me what may take a thousand words to say. Lets first look at time as being 1) a limit and then 2) as movement, and then 3) as a desire.

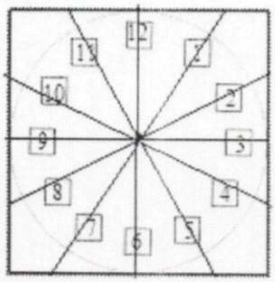

Figure 8.1

Here is the common face of an analog clock, each segment or piece of the pie is the same, all equal. There is no freedom for one piece to be bigger than another, everybody gets the same piece. This is good we say, because everyone is happy? Hmm, I'm not happy, I want a big piece, and she wants a little piece, and that person wants none and so on. Trying to make time fit everybody's desire and make them happy just doesn't work. We are all unique, why isn't time unique and fitted to our nature, instead of everyone has to fit into the standard piece of pie?

Why do we hold onto a belief that doesn't serve us? Well, I can hear you say, because if we didn't this whole world would go to hell, no one would be where they wanted to be, everyone would be late and or early and miss each other and trains would wreck and on and on. Well if we think that, that sure makes it true for us doesn't it. What if we were willing to just try something else, what do you think would happen? Do you think eventually it would work itself out in to a stable system and we could still go on living, and perhaps even in an environment more unlimited than the one we are in? It's up to each of us to answer that for ourselves, and if we say yes or no that is what we get.

Here is a figure of time being a linear movement from this moment to that moment, from 1 o'clock to 2 o'clock, from A to B.

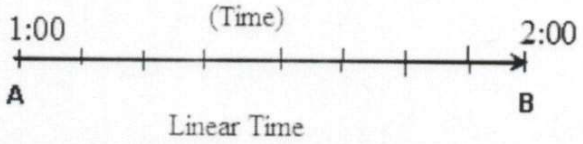

Figure 8.2

With this concept of time, we have many pieces of pie to eat before we get to the place we want to go (B) 2 o'clock. So we are limited in how fast we get to have what we want (B), and we may not want all that pie. So this belief about time can become a negative idea, or negative vibration that is opposing what we want (a positive vibration, a positive experience at (B)).

We could go on and find lots of positives or negatives, it is just an example of what one belief platform of time could be and what that energy would or wouldn't create for the person. We must look at our own self and see if what we are using is working or not. If it isn't we need to change something. These examples are fairly simple and may not reflect what we are doing in our own creative platform with our own belief structures. But we can learn a lot from the simple.

Let's say this belief of linear time really isn't what we want so let's change it. We must be able to believe it, to make it functional. It must be true for us or it won't work. We can't fake this stuff; it must match our core beliefs and connect with them to receive any sustainable connection and attachment into our structure. So let's consider folded linear time. We will keep our concept of time the same (linear) but we are going to change how it moves. Instead of moving linearly along the line, one piece of a pie at a time, we are going to take a short cut and move to where we want to go without eating all the pie (if we don't want to). This sounds like a good idea. On the next page is a diagram of what this may look like:

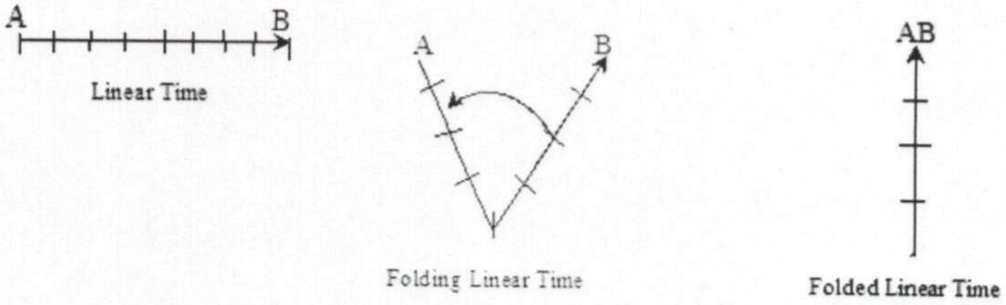

Figure 8.3

Now if this can be realized as clearly as linear time and become a functional belief in your mind, you could use this kind of vibrational pattern (energy) to create from. You could get what you want (B) without going though old fashioned time, linear, pieces of pie, minutes, days, years, etc. What we see here in this system is that A is already at B and our space/time reality would have to change to fit in our sustaining platform.

Let's look at another possibility and we will call this circular time. Here each piece of pie we need to eat to get to the other end will be a loop in a circular pattern, a cycle around and around, like our analog clock, but we aren't keeping track of cycles per se, we are sustaining our creating in time with a functional concept of periodic motion and using our reference point of observing to have a say in what time means to us.

It is continual movement in relative space and occurring over and over in relation to what we see or experience. Like watching a wagon wheel on an old-time stage coach, and when the wheel turns at a certain speed it appears the spokes stop and then start to turn backwards. It is how we are seeing the moving spokes with so many frames per second in our vision apparatus in our mind. The camera we are taking this picture with (our brain) is processing the input in a specific number of frames per time period. It is like the revolution of the wheel is being processed in a certain way that can give us different information at different speeds of rotation. What we will be doing in our circular frame will be to watch what happens with changes in our relative point of observation to the object of our focus (desire).

It isn't important to try to build this into a functioning concept because it is only meant to be an example and so play along. If you really want to create circular time, then you would have to fit everything we say into a true belief and in focusing on this truth, you would realize the outcome. As I write this, I can see things that aren't congruent within my mind about the time I am trying to create, so I would have to change some of my beliefs to make this work. I would have to prepare the soil differently to take this seed and plant it and make it grow into a vibrant plant, a functioning time system that works.

What is more important here, is not the building a new time system, but the understanding that one has to create from a place of belief, and belief is not based in possibilities, but in true reality, truth, and what one is certain about. "Focused Certainty" is what everything is made of in our reality.

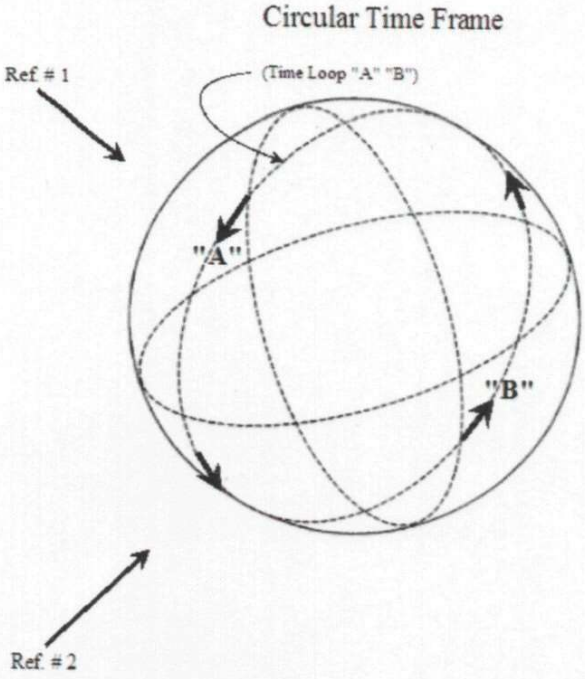

If you haven't seen UFO's you are not certain they exist. If you haven't been successful in making all the money you want in trading, you are not certain you can. If the market isn't going in the direction you want it to go, you are not certain about its direction.

Ok, back to the example of circular time, you put all the bells and whistles on this one if it is something you want to be in your reality, and if not, then it won't be important, it won't matter, it won't be in matter or made of matter, it will remain a possibility, a thought among the countless other thoughts not yet included in this space/time universe you are living.

So make a circular path for movement to happen on, and call it time from A to B (see Figure 8.4). And as A and B can be placed on this structure anywhere, because it is in perpetual motion, then A and B are happening at the same instant, right now, but we can move them along the circular path to allow for space between them and this could be called time. Here time is equal to space. In fact you may have already thought of this in the linear time and folded time example. Time and space are synonymous. They may not be equal in our definitions (how we use them) but they are spatial representations of the same thing; from point A to point B.

What we are looking at in the figure on the next page (Figure 8.4) is a circular path with two points on it A and B. Then we are going to assume two places in our reality space frame (3D space) to view it from. Since time is imaginary, we can place it anywhere we like because it is not limited to a particular coordinate in our space unless we say it is. We don't want to limit ourselves, so we won't say it; we won't make it one of our belief building blocks.

Remember we are the one who gets to choose what we believe and what we don't, (unless we default to what everyone else is doing--which is what most of us are doing.) So in looking at the relative spatial movement from A to B (Figure 8.5) we see that depending on where we look from, changes the amount of "time" (spatial movement). From Ref. # 1 there is very little time and from Ref. # 2 a lot more.

Depending on our point of reference to the frame, we will determine what spatial distance appears in our view, Spatial distance = time, therefore: we increase or decrease time by determining where we are in reference to the two points ("A", "B")

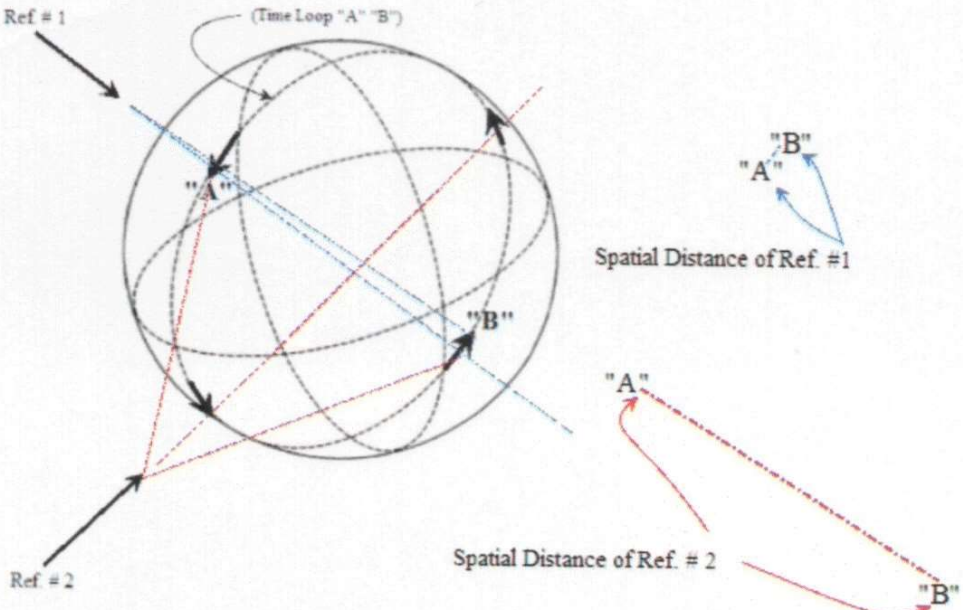

Figure 8.4

Now we have looked at time as 1) a limit, 2) as movement and now let's consider time as 3) a desire. "How can time be desire? That doesn't make any sense," you say. True, but time doesn't have to make any sense, at least any physical sense (5 senses of the body kind of sense). It is just a mental construct we decided to use and we are free to do whatever we want in our mind, choose which thoughts are true and which aren't. Choose what we want to believe and what we don't, this is our preeminent gift in life, we decide. But you need to remember you can do this, because without knowing we can, we don't.

How can time be desire? Well let's look at what we have said about time, it is not a physical reality (not solid, liquid or gas) and neither is a desire. It is a limited concept and desire is limited to the specific vibrational pattern it is made of. Time is movement from one o'clock to two o'clock, from then to now or now to then, past to present, present to future (you can add your definition too).

So desire is what we want, the next thing, then the next (future) experience or acquisition, concept, or whatever we are identifying as ok to come into the present now. Isn't our concept of time, just a simple way of saying, what has been is not here, and what is coming is not here, and so time separates what "is" from what "is not" here. It is how we define our present real world by comparing it to something not in it.

A desire is not in this world yet, the new car is not in my garage yet, so the space between my believing I will have a new car and having the new car in the garage is what we could call time. Desire is the part we are moving toward, the point "b" in the previous diagrams, the two o'clock in the linear frame. It is waiting to be here.

Desire is what allows movement to exist; it takes us into the future. To be without desire is to stay in the present moment and there is no conscious action to leave the present moment, just be there. To desire is to create an action of potential movement from here to there, from "not having" to "having", from wanting it in reality to living it in reality.

Let's make a picture and save us 1000 words. Here are a few concepts about a creation model using the Law of Vibration. First everything is vibration, so time is, desire is, belief is, reality is, you are, and everything is vibration. In this sense time and desire are both just vibration. So if they are the same vibration they are the same thing. What is a vibration of a desire? Well it would be a different vibrational pattern for each different desire.

So if our desire is "I want this car in my garage" and I don't say when I want it, then there is no relationship between this vibration of "I want a car" and the vibration of "time"; so not all desires will be related to time or the same as time. This is good to know, because if we aren't creating a desire with a time component, a matching

vibration of time, then it won't be created in time. Remember we are in a time/space environment, so it is important to include time in our desires, or they don't show up in this reality.

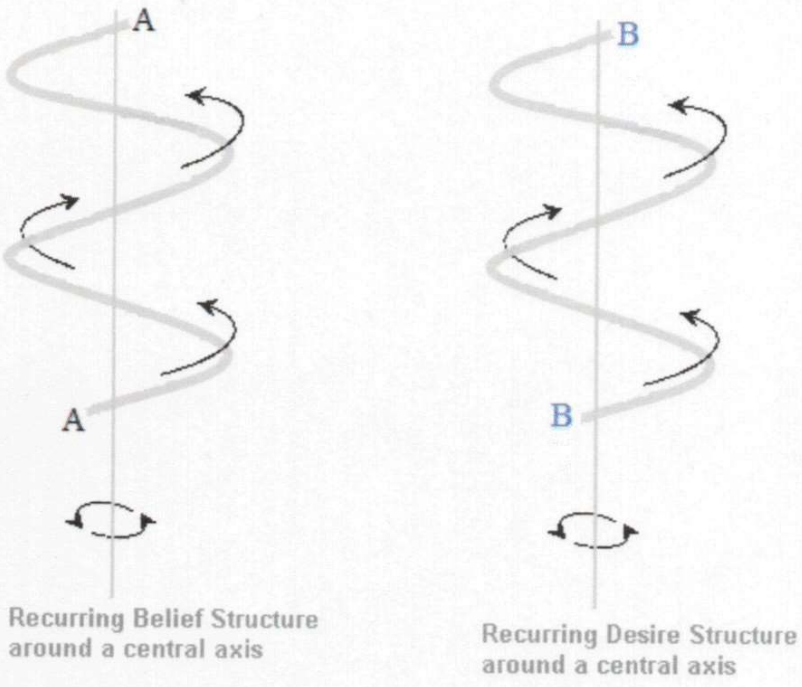

Figure 8.5

When we look at a diagram of the spatial relationship of belief to desire, in context to time (past, present and future), it will look like Figure 8.6 on the next page. Beliefs are in the past, they are what we remember as true and we base our understanding from these. Desires are not here yet, we want them, so they are a future event, a vibration not in this space/time yet, and they are waiting to come in and attach to the framework holding our Universe together. This combining of a desire to an established vibrational anchor, our belief structure, lets the new creation come into reality.

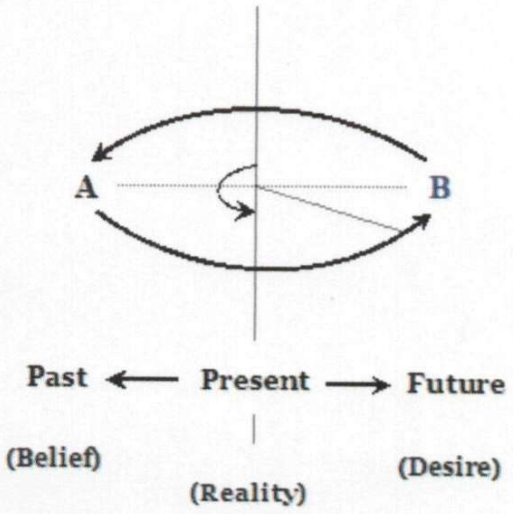

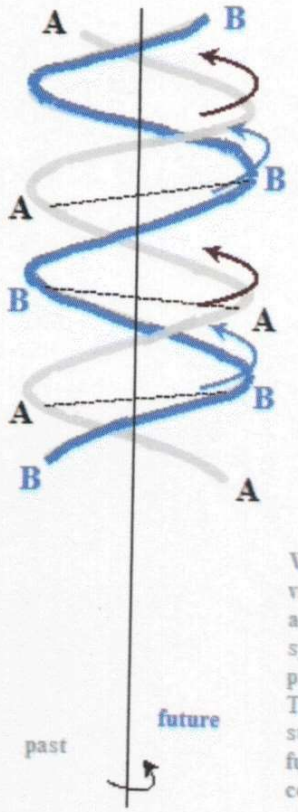

Figure 8.6

The cycle of the present, creating the future desire, using the past belief structure is a recurring movement. The new future then becomes the past after being created and existing in the present moment, and its positional reference point in this example is a position on the spirals path as it moves energetically (vibrationally) through space/time.

Now if we combine the singular paths of these two recurring spiral structures and place them at balance points opposite each other in the spiral geometry, we have something like Figure 8.7 on the next page.

Combining the two spiral structures together so they are balanced around a central axis, with **"A"** opposite **"B"**, gives a stable polarized strructure that will anchor the new desire "B" within the already established belief platform of "A".

With our opposing belief and desire vibrations rotating around a balanced axis point, past and future are syncronized with the central axis of the present moment.
The relationship of the belief / desire structure to time, establishes a functional creative platform for our concept of time.

Figure 8.7

This "Desire" based structure for creating a definition of time can be quite flexible in allowing us to choose, like we did in the circular time example, our reference point for viewing time, and in so doing change the spatial movement to what we want. Lot's of time for fun things no time for what isn't fitting our list of desires. Since desires are creating time, we would use time in conjunction with our conscious creative process.

A question that may arise is, "well what happens when I'm not consciously creating?" What happens when you go to sleep? There is no time, right! And because you have been defaulting to a linear time frame, since you learned how to be a good boy or girl at an early age "to be on time", be on the time of the one telling you to be on time, their time, and you bought it and are still doing it. In fact I would bet you have taught it to your kids.

You may not be able to remember when you were really young, before you could talk, but you didn't need time like the world needs it, and you were living a wonderful life and didn't even know about time. Now that you do, is it really what you want? Or do you want to make it your way, not this limiting default we think we have to use. Something we can think about in our "spare time".

In each of the time examples we have been looking at I used a different geometric pattern to build it from. Linear, circular, spiral, and we could use any other one and come up with a viable possibility. It doesn't matter what it looks like, it matters if the mind believes it and allows it to establish itself within the time/space structure we are holding. You may have noticed a resemblance of the last example of the spiral time frame to the DNA double helix. Before this concept was brought out into our world, it didn't exist and wasn't a useable construct. Just in the last few decades it is changing our world very quickly. Could you do the same thing? I don't see why not.

Ok, moving right along here: our mind creates two things:

1.) What is and what was
2.) What is and what will be.

These are called a duality, two things in one. It is an interesting creation and we love it because we "are" in it and keep creating it. The thing we may forget is that "we" are creating it and we do it in our mind. Our body is only in the present "now" and we don't argue with that, in fact it makes it really easy and it's a wonderful experience but our mind is another thing, and we get a lot more complicated here.

The simple life of being in a body in this moment is set aside and our attention, our focus on awareness goes into a vibrational pattern that is supporting another one. The foundational pattern we will call a belief, or a belief structure or platform. The new one that is being supported by this foundational platform vibration is a similar matching pattern that the two shares a harmonic resemblance to. We will call this a desire; a new vibrational pattern we are wanting to experience.

When we use time, the limiting effect of believing the construct of time, we are defaulting to what is happening now and going along with this generated time sequence of a measurable duration. Limiting our ability to create new vibrational patterns within these limits, these graduated movements of one to the next, to the next as measured by some cyclic periodic interval. By relying on this energetic platform to create from, we are limited to what we can produce from these limited matching energy patterns.

A limited energy pattern will produce a limited new energy pattern. We can't create more from less, clarity from confusion, opposites don't create - they diminish. Waves meeting out of rhythm and crashing into each other will reduce the resultant wave. When they met in unison, in harmony with each other; the result was an increase of energy, a creation not a diminishment.

Without the limiting construct of our old belief platform of time, we are not limited by these graduated modules of experience that must align in sequential order and be rigorously followed. We free our creative process to build from a more abundant and unlimited source. Our resultant creation is more abundant and unlimited.

Looking at our understanding of time and how we are using it, either by default or perhaps by some notion of volition would give us more options at our process. It is a large part of what we are connecting into as far as our source of creative energy. If it is not unlimited, then we are holding our self unnecessarily back from our full potential and not utilizing what is available.

Why use a spoon to dig a hole when a powerful backhoe is sitting right there and waiting for you to learn how to use it. We need to get off our butt and out of our past limited belief structures and use the technology available to us now. Time is more than a clock ticking, or number of bars across a chart that regularly appear and we wait for them to get to where we want them.

Opening to our real nature and the power and creative opportunity we possess will get our desires fulfilled without waiting for time to be the absolute measure we worship as true. Think about it, haven't there been times in your life where you remember doing something and time seemed to stand still or went by so fast you couldn't believe it? Why you couldn't believe it, was because you were so stuck in believing something else, something so old and set in the history of our mind that you dare not question it or look for more or less, the possibility of time being different than what everyone says it is.

Yes the 1000 sheep were saying the same thing as they jumped off the cliff. It isn't what everyone says, it is what you say, what you want to do about aligning your belief structures to new creations, aligning vibrations of desired newness with a vibrational platform you are willing to believe and make it a functional source of energy within your mind. You have to believe it or it isn't. You have to believe you can or you can't. You have to believe or it won't be, it will not create here in time/space and be sustained as time/space reality, as real. It is how the Universe operates, it is the law that keeps it working so well and that is a good thing to know. You know this and you know how everything works here, everything.

Markets and traders are vibrations, and fulfill the law of vibration; and are not limited to old belief structures when one is willing to let a new one operate as truly as the old. Things have changed over the eons, and will continue to change. It isn't about something can't change; it is about will I change it and allow the new to be my focus of belief, my focus of energy into this time/space reality.

I don't expect you to accept all this and start creating without our old limiting time. In fact, I know you can't until you form a foundational platform to sustain it, and that doesn't need time (unless you still think it does and most of us do…until we don't). So relax and allow a small beginning to start, a possibility of seeing time differently, and that it may not have to be as rigid and limiting as we have come to know it.

If we had grown up on another planet where there was a different concept of time, being taught it from birth, then we would be living much differently than we are here. So give it some time, we are in it still you know, until you don't.

Chapter 9

Vibration within Numbers

I am convinced
All of humanity
Is born with more gifts
Than we know
Most are born geniuses
And just get de-geniused rapidly

Buckminster Fuller
1895 - 1983

Numbers are amazing little critters. If we didn't have them, we wouldn't have the world as it is today. Almost everything man has made has required the use of numbers in its creation. What we haven't done, is to really look at these figures on a piece of paper, or a screen, or to hear the sound of it as it is spoken and know what it is?

First we should recognize that numbers are vibrations. They are unique vibrational energy patterns that interact with each other in a very predictable way, a knowable way. We do this just by adding, subtracting, multiplying and dividing them. They are consistent and give us an answer that lets us begin, build and finish creations.

What they are also is a symbol for something else, and as they combine with external and internal things, they bring with them an additive element; a modifying energy that changes what was prior to what is now the new composite. "One person" is a specific energy vibrational pattern, "Two people" is the symbol representing a different pattern all together, it is a composite of two ones and will have its own specific

pattern. "Three people" is a new symbol of a very different and specific entity, and its relationship with other things is unique to that energy pattern.

As we will see with the addition of the numerical symbol, the new vibrational pattern it can both limit and enhance the energy potential of the original. By using compatible patterns we are able to enhance our creation of newness, and because of a mismatching or dissimilar energy pattern we can limit the outcome.

First let's talk about some history of what man has been doing with numbers, and we don't need to go into the obvious, like how we use numbers to count our money to see how rich we are. But let's do look at numerology briefly, and see where man has used numbers to look at the past and future. This is just a cursory look, because we are not looking at how a number can tell us the future, because it can't. Numbers are symbols, they don't talk, they don't think like we do, they are merely symbols we use within the conscious functioning of our own mind, and it is how "we" do this that we are interested in, not how someone or something else does it.

So let's see what these symbols are that we put together in a certain fashion and call it a method, or a number system to show us what we want to find. After we look at three common numerology systems, we will then go into the structure of the number itself and see how we can combine other patterns to it, to be able to know that thing, like a stock or commodity or person, over what we can call a span of space and time. This time includes past and future which we seem to think is helpful at times in our trading experience.

The Chaldean Number system developed in ancient Babylon assigns a number value based on sound vibration. 1 – 8, 9 isn't used as it is considered a holy number and not included in the vibrations of the other numbers. Compound numbers are always used, with single digit's representing the outer aspects of the person and double digits represent the inner aspects.

The Kabbalah Number system was developed from Hebrew mysticism, using the 22 letters of the Hebrew alphabet ranging in vibration from 1 to 400. There have been several adaptations to the Greek and Roman alphabets and this system has been around for a long time.

Pythagorean or Western Number system is assumed to have come from Pythagoras around 600 B.C. There is some question though, because the only writings of this system are from a student of his, named Philolaus, and that Philolaus may have developed his own system and attributed it to Pythagoras. The system is developed by giving numbers to each letter of the Western alphabet and is not directly related to a vibrational source such as sound.

1 2 3 4 5 6 7 8 9
A B C D E F G H I
J K L M N O P Q R
S T U V W X Y Z

Pythagoras was intricately aware of and involved with musical intervals. He expressed them as ratios using the numbers 1, 2, 3 and 4 which when summed equaled 10 and that all numbers larger than 9 can be reduced to a single digit by adding the digits. Because Pythagoras was intimately aware of the relationship of musical intervals, sound vibrations and relating them to the planets, it is wondered why his numerology system isn't connected to vibrational considerations at all?

Many numerological systems have been developed through the ages, Egyptian, Hindus, Mayans, Greeks, Hebrews, Chaldean, Chinese, Western Pythagorean, and each has its own unique way of using numbers to represent a definitive means of identifying the illusive concept of bridging time.

Because numbers have been used to see the past or future, it is a quest man has been on since time began and it is evident, by the numerous systems, that there isn't only one correct way, but it is a function of a person choosing one and making it true for himself. In the belief that it is true comes the manifesting platform to create further similar creations and we come to realize our wants and desires. We use these belief structures as tools in creation and so as we select our tools, we begin to combine vibrational patterns into new ones, and satisfy our wants and desires.

People have been using the planets movement (usually around a zodiac) as a means of knowing past and future. These symbols are celestial markers identified by degrees around a zodiacal circle of 360, and are used to overlay past events with projected future events. The division of this zodiac, into numerical partitions, sets a matrix for geometrical patterns to emerge. These patterns are a means of understanding underlying vibrational similarities. Comparison of the similarities to past known events has provided an avenue into the quest to understand the future. When these similar patterns match, there is reason to believe, the patterns effect will be similar in the external form.

When a ball is dropped from a tree it falls to the ground in a regular predictable way. The falling ball pattern when matched to another falling ball pattern will yield the same result. In looking at a grand cross pattern of 4 planets arranged in a specific area of the zodiac and then seeing this same pattern, with the same 4 planets in the same area will more than likely result in a similar external effect. So when one becomes proficient enough to recognize these patterns and project them into the future, the likelihood of that effect repeating is high.

People born on a particular day will have a unique zodiacal pattern as their natal signature. When this pattern is connected to a present day pattern in the zodiac, a

matching will cause a repeating of an effect, and a non-matching will not cause a repeating of the past effect. If one has been aware of what these two patterns did in the past and they come together again, then a repeating of this effect will be known. It is a collecting of patterns coming together and remembering their effects that allow predictive assumptions to be made with a high degree of accuracy. Numbers are the underlying symbol that allows these patterns to be visible to our awareness.

Each degree in the Zodiac has a unique vibration just like each number in a numerology system has a unique vibration. Each of the 12 signs has a specific vibration. Each combination of elements in the astrology system combines to form their own unique vibrational signature, too. Awareness of these symbols will reveal when matching past patterns are connecting with upcoming similar symbols that an outcome is knowable.

Now we are going to look at numbers in a way very few people have seen them. It may take some time to see the usefulness of this way of seeing, and you don't have to see this way. But when you can see something that others can't see, you begin to have an advantage over them, if you are both trying to reach the same end. By knowing a better way to get to the end, you will get there before the other. In a trading situation, when you know more and get there first, you win. So take your time and see if this way of seeing becomes something that you can use, to get an advantage over the others.

When we look at patterns of vibrations we are looking at a symbol of the vibration and using some kind of independent form to describe it. We can use lines, pictures, numbers, graphs, sounds, colors, gradients of a material form, or anything that can be distinguished from something else. These symbols serve to represent the vibration and to compare it to other vibrations.

Numbers are frequently used as symbols to describe vibrations. But in this chapter we want to distinguish between the vibrations of the numbers themselves and so we will need to use a different symbol than numbers to show the patterns. We will use a graphic representation, the Square of Nine grid to set all the numbers in. These patterns created within the grid can then be used to match patterns of other things that can be represented in the square of nine, including financial instruments and markets.

Matching the vibration of number 5 to a market that vibrates to five, let's us tap into the pattern of both, and if we know something about the one we know something about the other. They move in a similar way, because the Law of Vibration is a matching of similar patterns forming balance and harmony within the structure of the vibrations being brought together.

Numbers are different energy patterns, and a five is much different than a six, a 3 is different than an 8, etc. Each one has its own pattern and to connect with another, it must do so with a similar pattern. (*See Chapter 12)

Here is a Square of Nine grid with numbers starting at 1, going counter clockwise around the grid to 841. Look at this grid that we will be using and notice your way of seeing the patterns of individual numbers, before I influence what you think with what I see. Look at it and see what you find, then go to the next page.

Square of Nine Grid (1 at center / counterclockwise)

785	784	783	782	781	780	779	778	777	776	775	774	773	772	771	770	769	768	767	766	765	764	763	762	761	760	759	758	757
786	677	676	675	674	673	672	671	670	669	668	667	666	665	664	663	662	661	660	659	658	657	656	655	654	653	652	651	756

Figure 9.0

Many traders are using the "square of 9" as a trading tool, so I will use it as a way to see vibrational patterns in numbers, and if you have the desire to take it to the next phase of connecting it to the market's time and price movement, then it could be a useful tool to see how a market corresponds to vibrational patterns of numbers. If one knows a market vibrates to a certain number, then this number represented on a sq of 9 chart would be a matching pattern to the movement of the market and its relationship to the same square of nine.

Most people are aware of the square of nine being a square's generator. That it produces odd squares on one diagonal and even square's on the other and is a sublime example of the balanced and predictable nature of numbers in this geometrical pattern. But what many may not know is that the square of 9 is also an octaval chart; each shell is the next octave (8) added to the previous one. So it is a progressive octave chart --- 1, 8, 16, 24, 32, 40, 48… etc. Because we are using this "8" progression in the graphical pattern, the representation of each number will be through this filter. It will give us one way to view numbers in vibrational patterns, but it is only one. You have available an infinite array of possibilities and what you select as your tool (in this case - octaves of 8) it will limit the view to matching patterns within the octave vibration.

But because this is a widespread vibration we are all familiar with, 1/8ths of a whole, musical octaves (do, re, mi, fa, so, la, ti, do) etc, it's a good place to start. What you may want to do eventually is identify your own vibrational pattern and use a similar number vibrational pattern to work with. When we are connected to a tool that is our natural vibration it will be much more responsive to our movement.

Within this square of 9, progressive octave chart, we can look at these things we are calling numbers and see them related to each other as they all lie on the same matrix. This positional representation of the numbers is a spatial view point, and we could also look at numbers in a time frame, which would show us more of their unique relatedness to time. It isn't that we are looking for a certain thing here, we are looking to see that everything is in relation to everything else, and this relationship is what tells us the what, why, how, when, where, and etc. This looking, through a stable reference system, allows us to bring singular elements in combination with others and to form a comparison and know how they are responding and how they will respond.

I will put the square of nine grid back up and this time let's look at the vibration of the number 5. Investigate what this number is, and what it can be, and what it has been, and what it does or doesn't do? See what you find.

Five (5's)

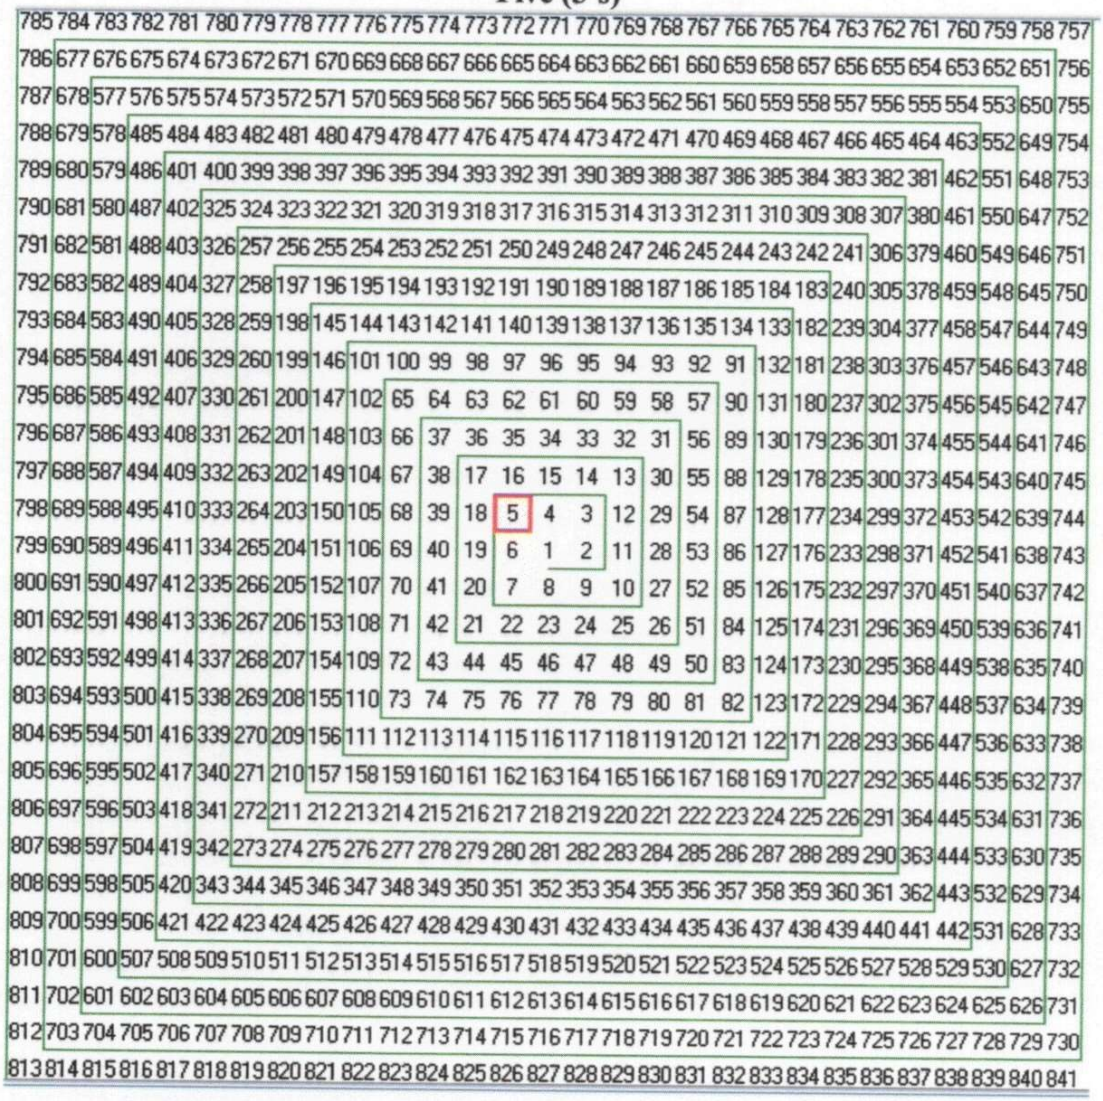

Figure 9.1

I will add some multiples of five and see what happens.

Five Multiples (5's)

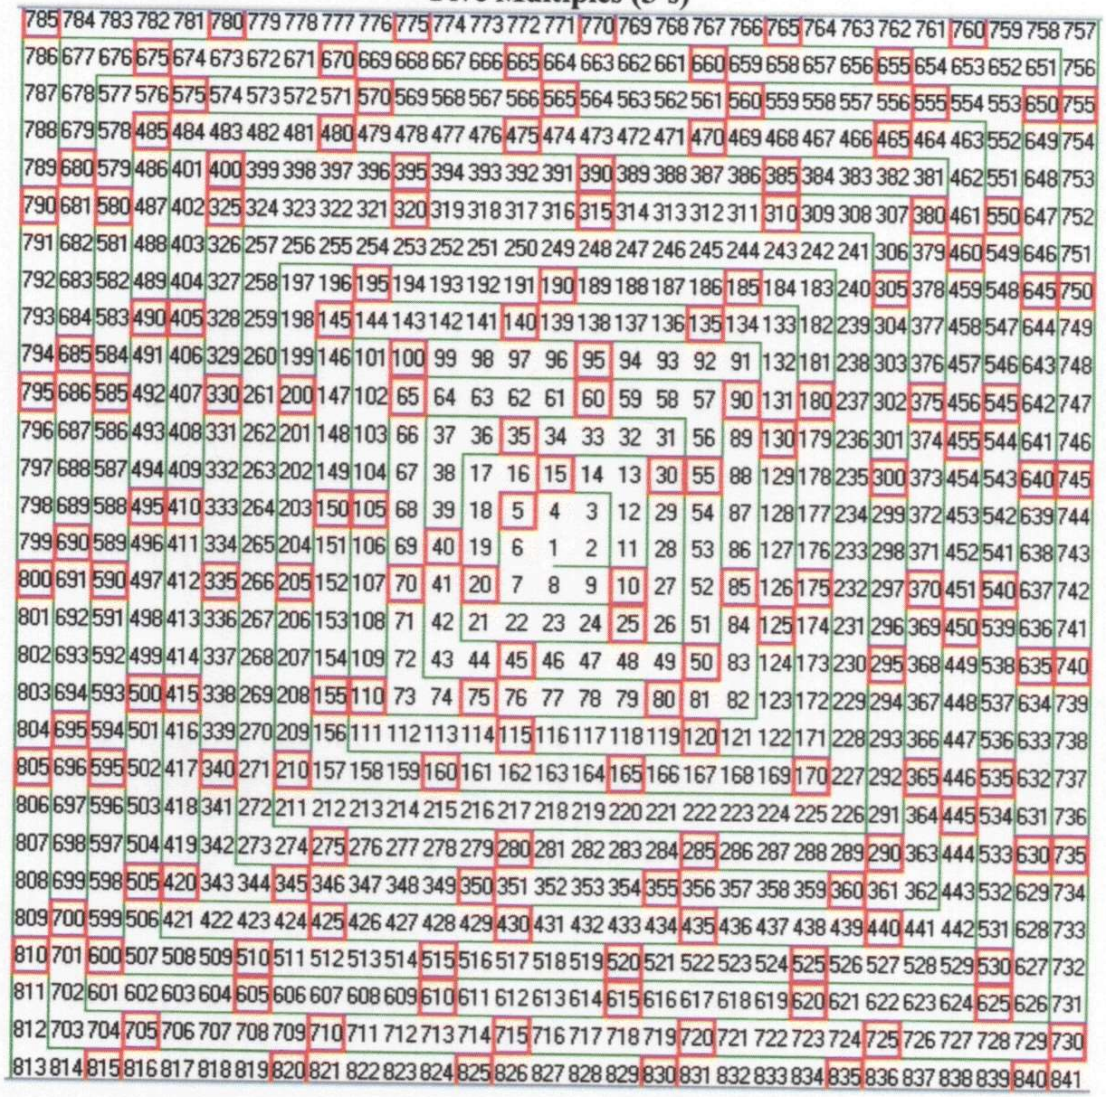

Figure 9.2

Here are all of the multiples of five on the grid. What do you see? You should write it down or make notes on the page because after you turn the page and see mine, you may forget where you were going with it. Your way is more important than anyone else's, be willing to trust it.

Here is what I saw, a repeating pattern of two forms, a two and three pattern emerges and adds to what we are seeing on the grid.

Five Multiples (5's)

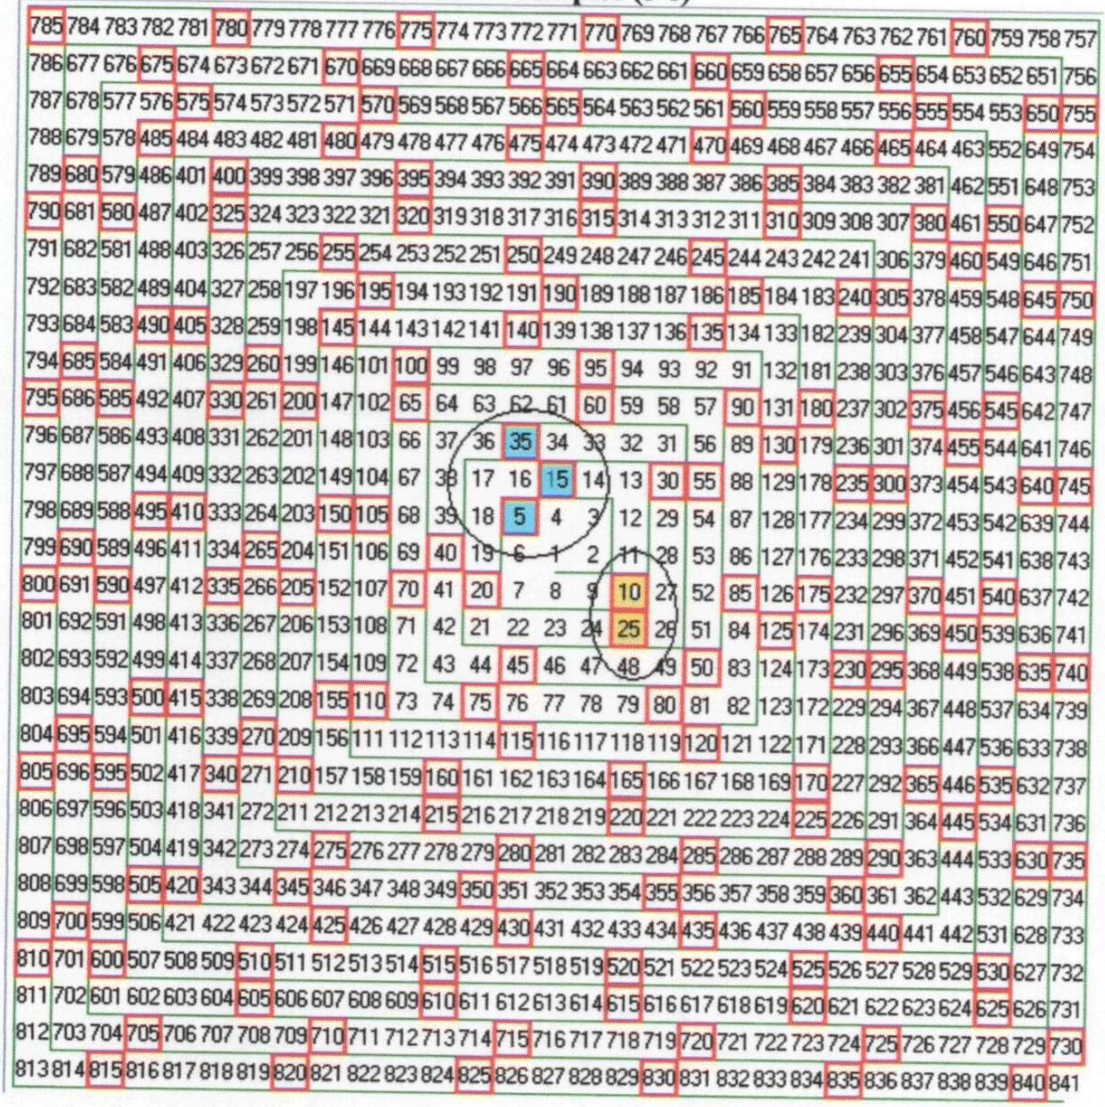

Figure 9.3

What about this pattern? What does it do or say to you?

Here is one way to look at this particular pattern as it moves around the square of nine. Movement is what we are interested in, because the markets move and we move and trading is a movement of entering and exiting and accumulating. How this pattern moves can be important in relationship to how a similar vibrational pattern of a market may move.

Five Multiples (5's)

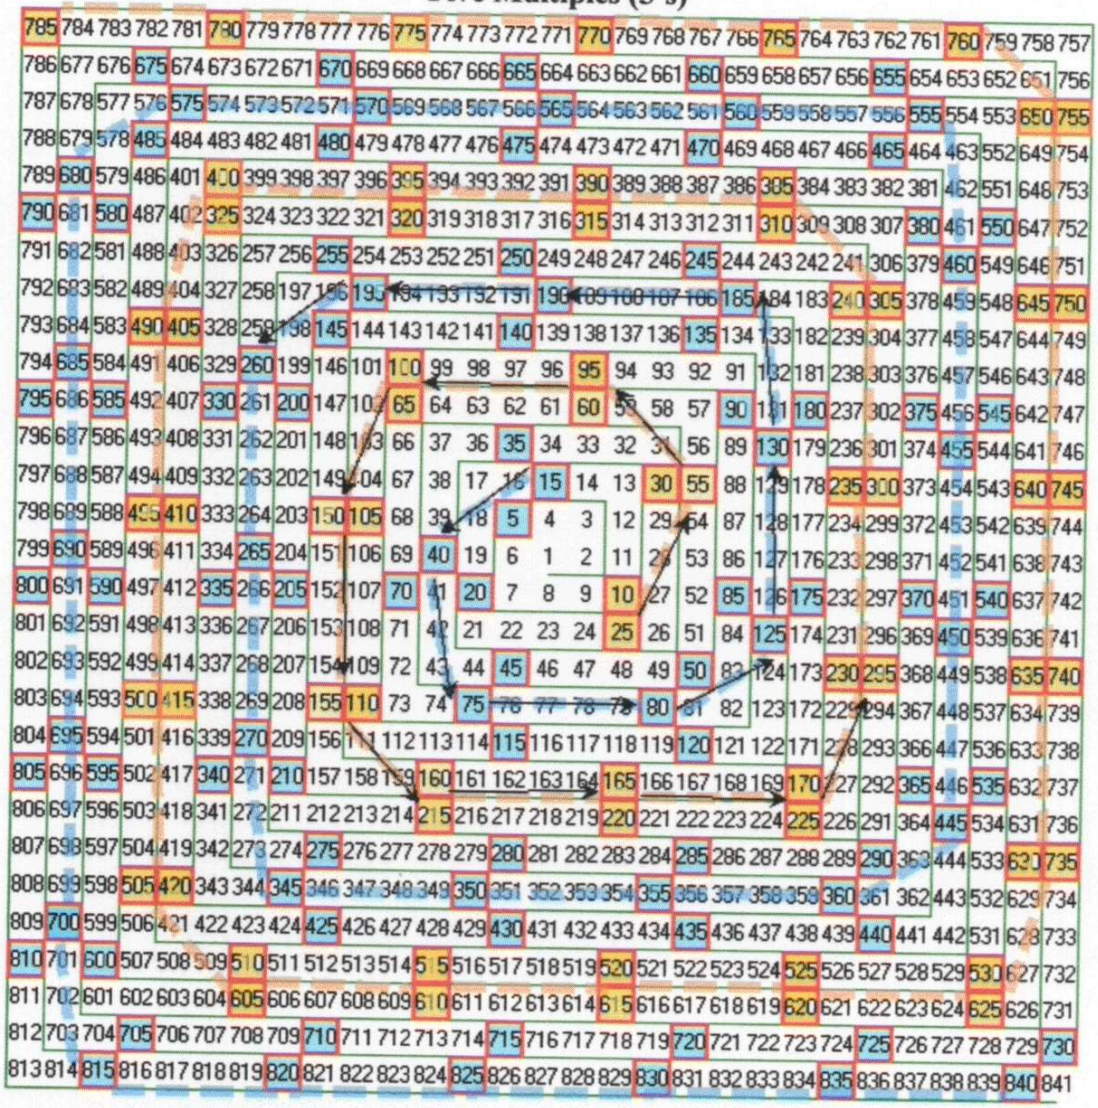

Figure 9.4

This particular pattern of multiples of five arranged in sets of 2 and 3 move in a circular matching pattern around the previous sets and form a regular repeating

pattern that has a very easy to see predictive nature. This is the number fives' unique pattern and the other numbers will not do this. There are nine numbers and some of these will be multiples of prior numbers and so will be similar in some way. The number 2 is different than the number four, but they are also similar in that two and two are four. So a pattern of 5 and 10 will be similar but have differences also. If we look at this same pattern for a grid holding multiples of 10 we see that it also has this basic circular pattern of movement. But we notice that the underlying pattern is a 1, 3 set pattern and not the 2, 3 set we find for five multiples. Study these two patterns and see how they are formed and how their movement is created and sustained.

Ten multiples (10's)

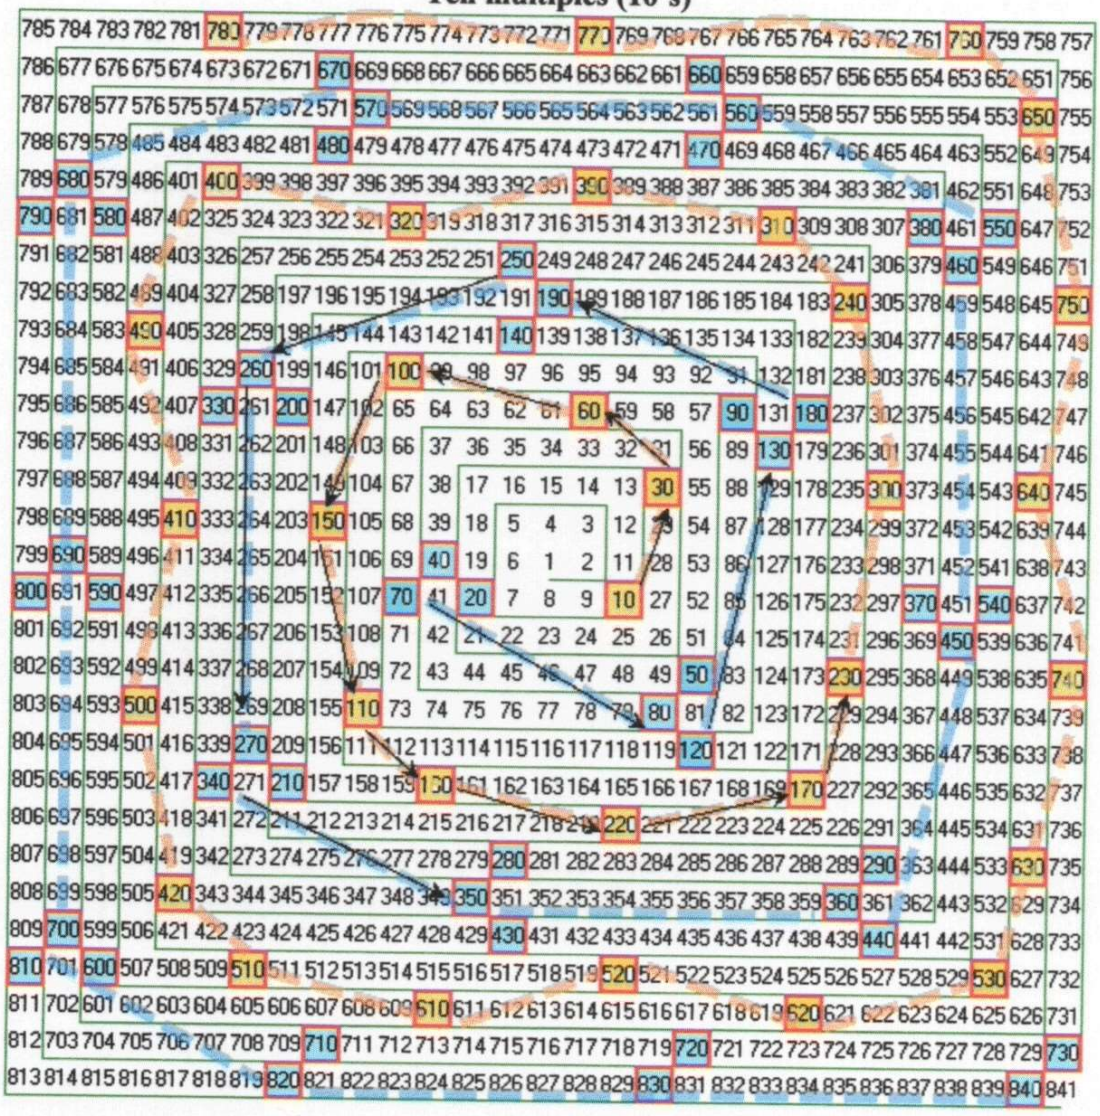

Figure 9.5

Now let's look at some other numbers and how they show up on a grid. They will be very different than the five, because there isn't a multiple of five within the core numbers of 1 to 9. Two, three and four have multiples within this core set and will reflect their similarity of patterns on the grid.

Two Multiples (2's)

100	99	98	97	96	95	94	93	92	91
65	64	63	62	61	60	59	58	57	90
66	37	36	35	34	33	32	31	56	89
67	38	17	16	15	14	13	30	55	88
68	39	18	5	4	3	12	29	54	87
69	40	19	6	1	2	11	28	53	86
70	41	20	7	8	9	10	27	52	85
71	42	21	22	23	24	25	26	51	84
72	43	44	45	46	47	48	49	50	83
73	74	75	76	77	78	79	80	81	82

Figure 9.6

A one and two multiples set will be too cluttered to see a pattern because their pattern edges border all the other numbers edges and we can't see a pattern from the edges. (See above.) Patterns are seen because of the edges between what is and what isn't, between the void and form, between the spaces and the lines. The Ones (1's) are a full pattern and the Twos (2's) are a checkerboard pattern but not easy to see on this particular grid. So three is the first number that reveals a pattern (and this is what it looks like on the next page) See what you think before going on.

Three Multiples (3's)

785	784	783	782	781	780	779	778	777	776	775	774	773	772	771	770	769	768	767	766	765	764	763	762	761	760	759	758	757

Figure 9.7

Here is the three multiples grid and I have indicated a different pattern by shading in part of the void pattern. It creates a linear grid of numbers and spaces that indicate movement in a different way than the five pattern we were just looking at. We can draw many ways to see patterns; you can experiment and find others.

Three Multiples (3's)

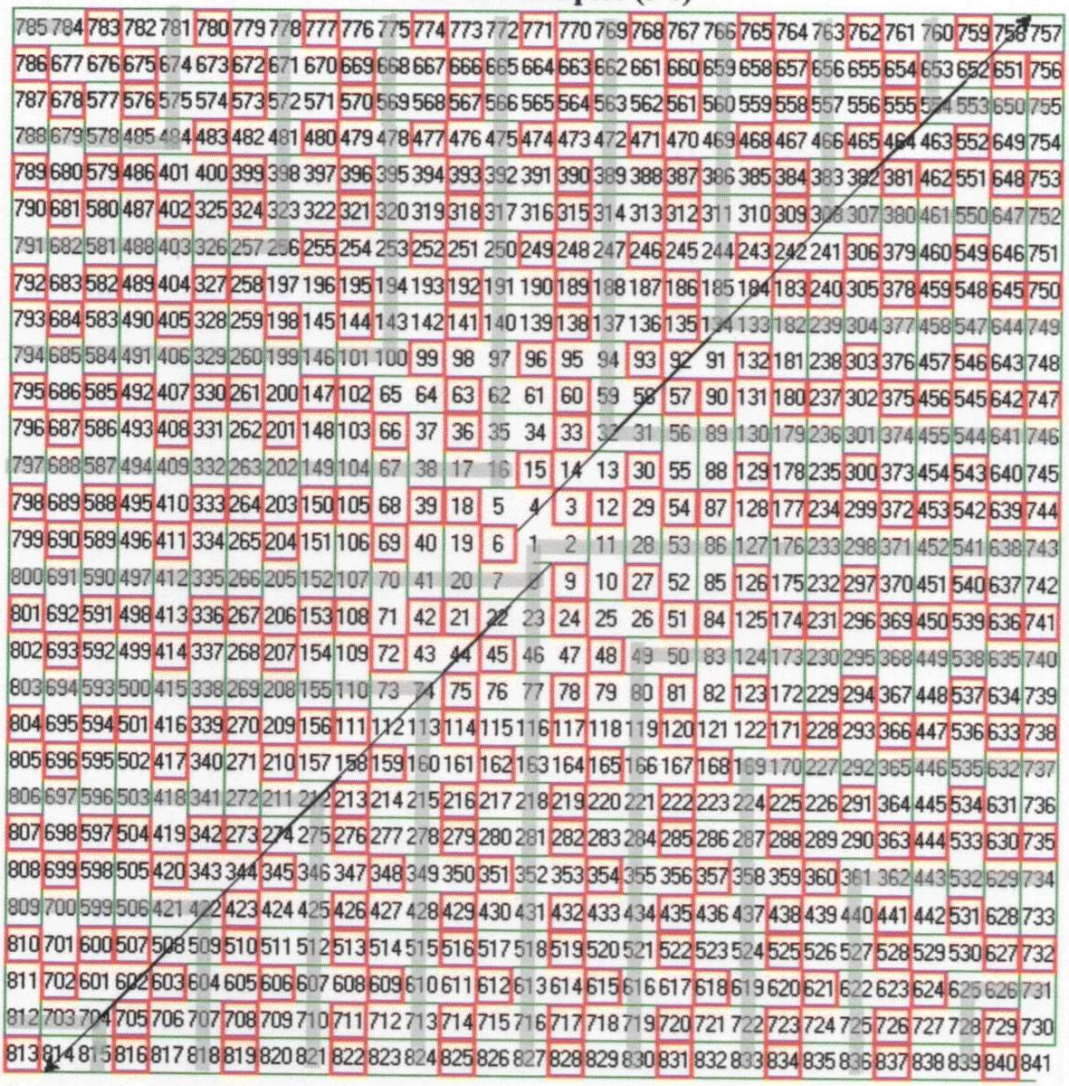

Figure 9.8

Here is a Four (4's) grid set, notice how different this pattern is from the three (3's) or five (5's). As you can see, this is a very regular pattern and reflective of two sides of an axis. Remember we are looking at these vibrational patterns of numbers on an octave grid, so a 4 being a multiple of the octave will show up much differently than a three or five which isn't.

Four Multiples (4's)

Figure 9.9

Now we will include the Eight (8) and Sixteen (16) Multiples and notice what happens to the four pattern.

Eight Multiple (8's)

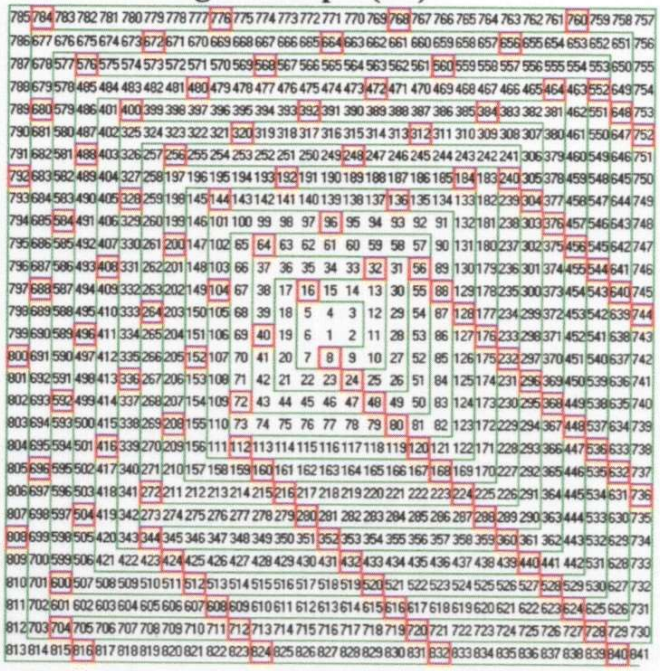

Figure 9.10

Sixteen Multiple (16's)

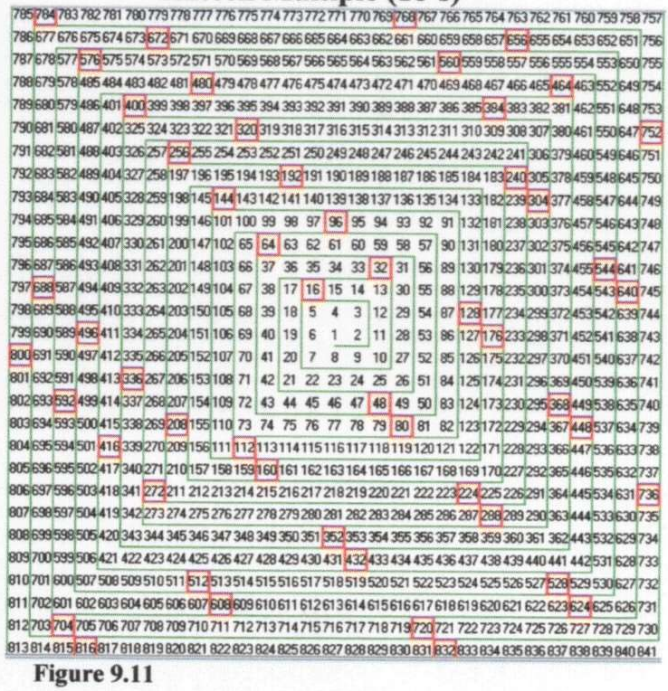

Figure 9.11
